

RIPE NCC

RIPE NETWORK COORDINATION CENTRE

Carrier Grade NAT in Europe?

An Analytical Approach to Policy Making

What Is This About

- Statistical data is only useful within a context
 - Most of the value comes by combining data sources
 - Need to understand some of the inner mechanisms
- Going to give an example using CGN
 - Disclaimer: these are all estimates and predictions
 - There is a significant error margin:
 - Not every RIPE NCC member offers Internet access
 - Enterprise, SME and other businesses are ignored
 - There is always overhead in IPv4 pool management

Rule #1:

“You can only connect to the Internet if you have an IP address”

“Do you have enough addresses for every customer?”

1

“magic number”

Example: Magyar Telekom (Hungary)

“Size: 1.4 million IPv4 addresses”

Routing Status (AS5483)  

 At 2017-12-04 08:00:00 UTC, AS5483 was visible to 100% of 156 IPv4 and 100% of 157 IPv6 RIS full peers.

 First ever seen as origin announcing 145.236.150.0/24, on 2000-08-18 08:00:00 UTC.

Originated IPv4 prefixes: 104
Originated IPv6 prefixes: 18
Observed BGP neighbours: 150
Address space announced (IPv4): 1389312 IPs
Address space announced (IPv6): equiv. to 1048577 /48s

 [Advanced Settings](#)

Showing results for AS5483 as of 2017-12-04 08:00:00 UTC

 Results exclude routes with very low visibility (less than 3 RIS full feed peers seeing).

 Given query time (2017-12-04 08:00:00 UTC) has been changed because it is earlier than the time there is data available for!

How Big Is Magyar Telekom?

- 1 million fixed broadband
 - Growing 4.3% over last 12 months
- 5.4 million mobile users
 - Growing 1.9% over last 12 months
 - Caveat: maybe not all mobile subscribers have data

Operational statistics – access numbers	Sep 30, 2016	Sep 30, 2017	Change (%)
Number of mobile customers (RPC)	5,301,049	5,400,966	1.9%
Postpaid share in the RPC base	58.9%	62.6%	n.a.
Total fixed voice access	1,437,116	1,420,725	(1.1%)
Total retail fixed broadband customers	1,018,564	1,062,528	4.3%
Total TV customers	978,692	1,016,192	3.8%

Source: Magyar Telecom Plc, Q3 2017 Interim Financial Report

High-Level Analysis

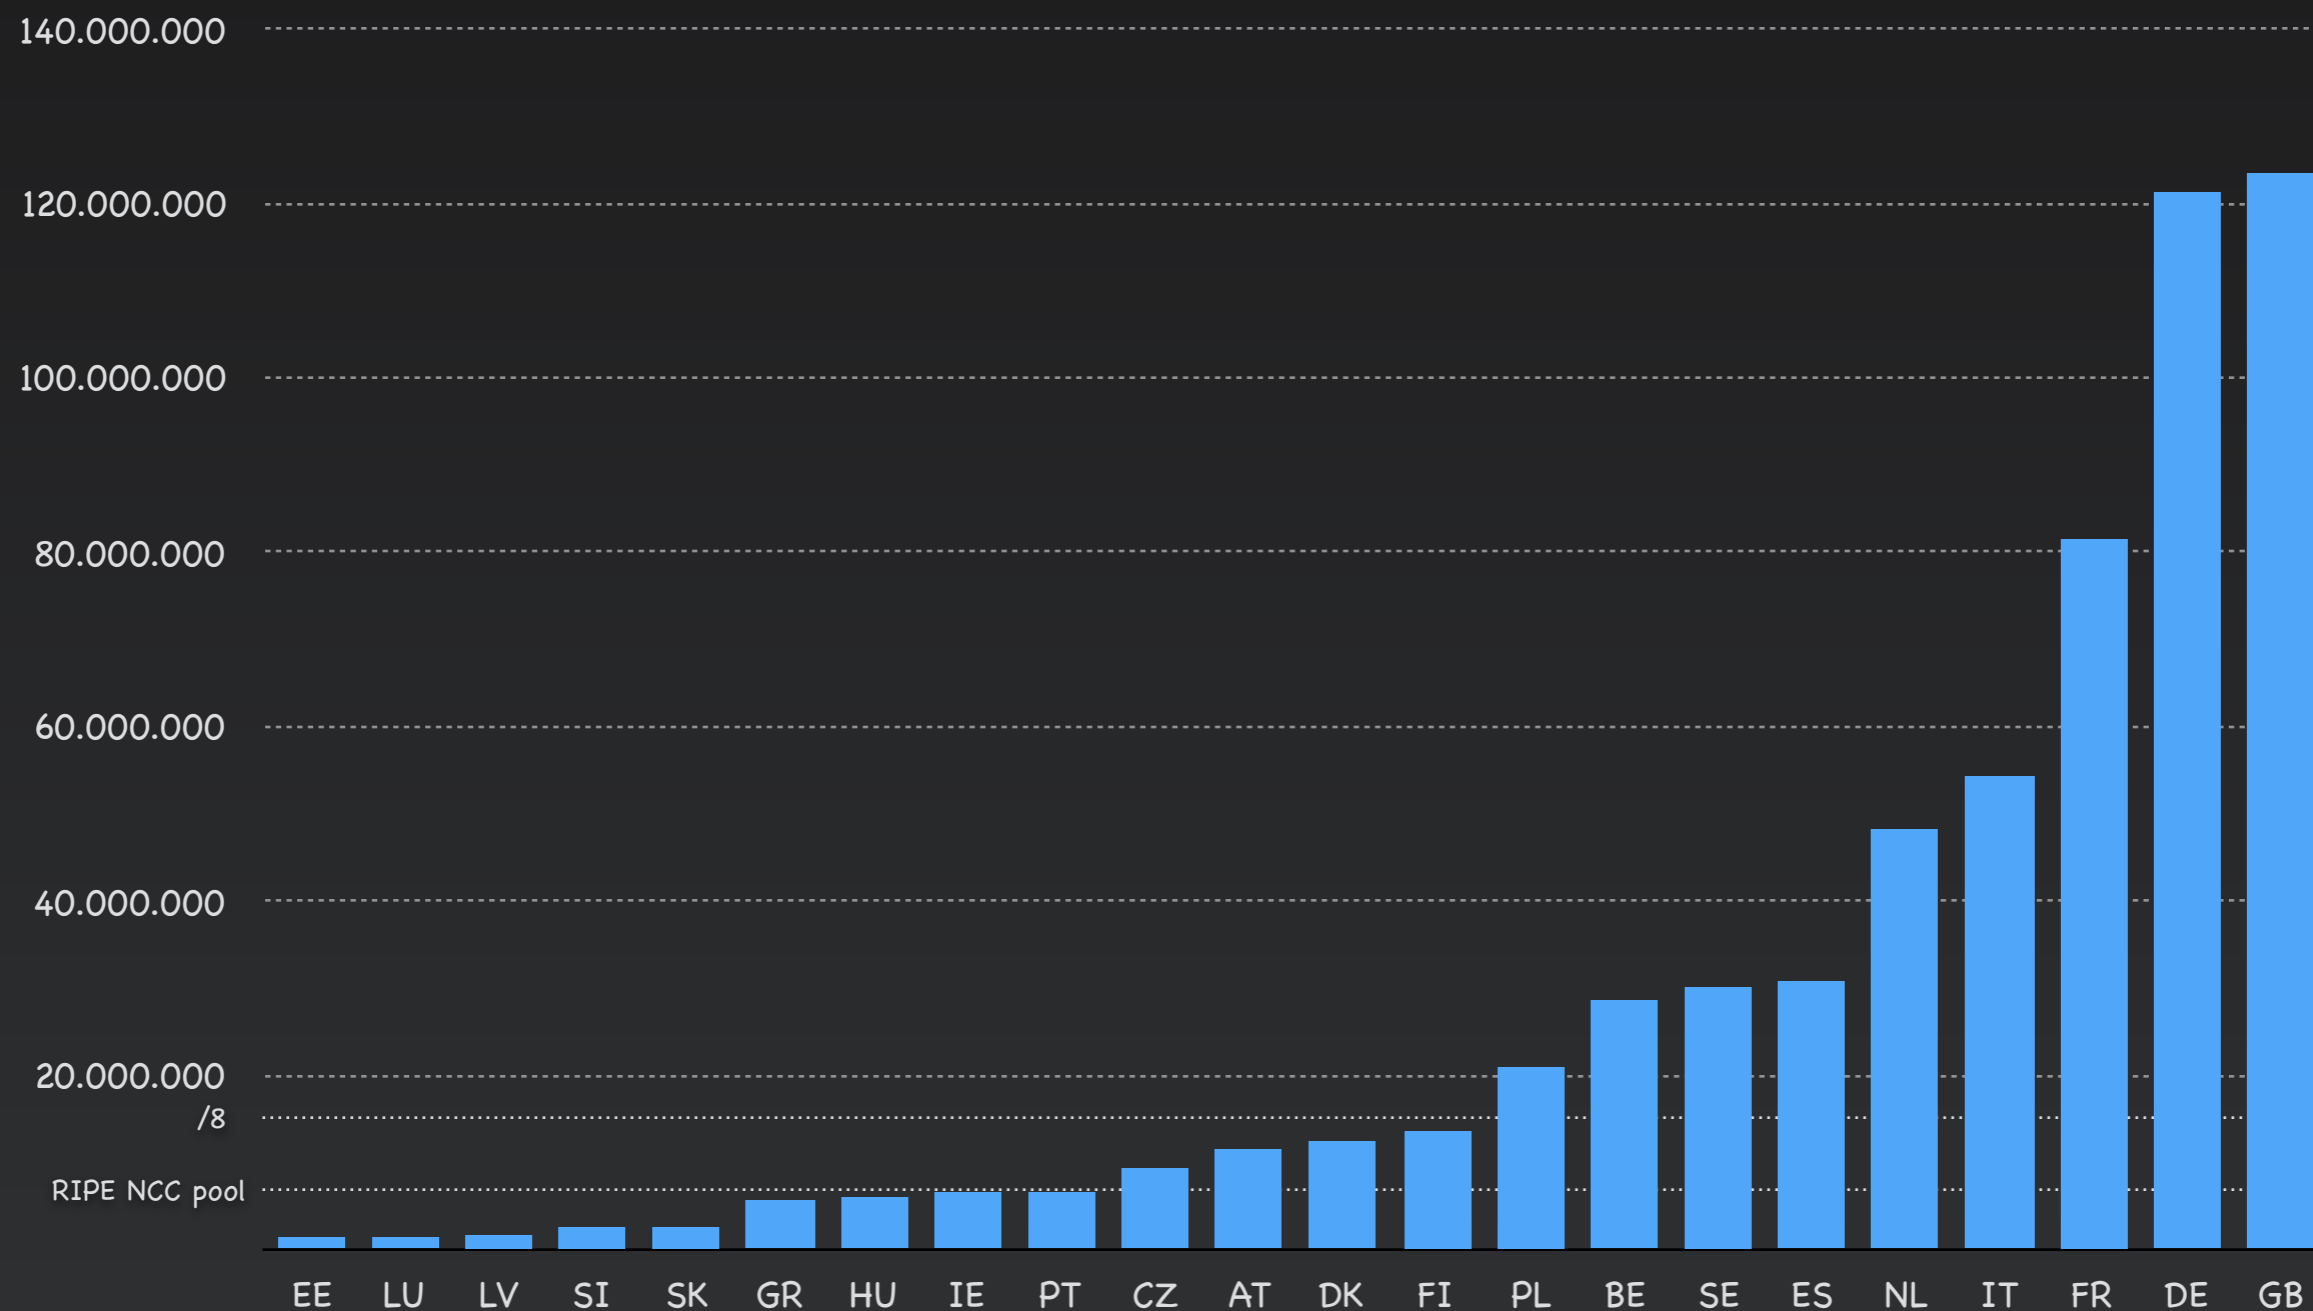

- Magyar is reporting 6.4 million connections
 - With only 1.4 million IPv4 addresses visible
 - Likely scenario, common in market:
 - Fixed broadband to use “regular” IPv4
 - Mobile broadband uses CGN
- They are reporting growth
 - How long is this still sustainable?
 - How many customers need to share a single IP address?

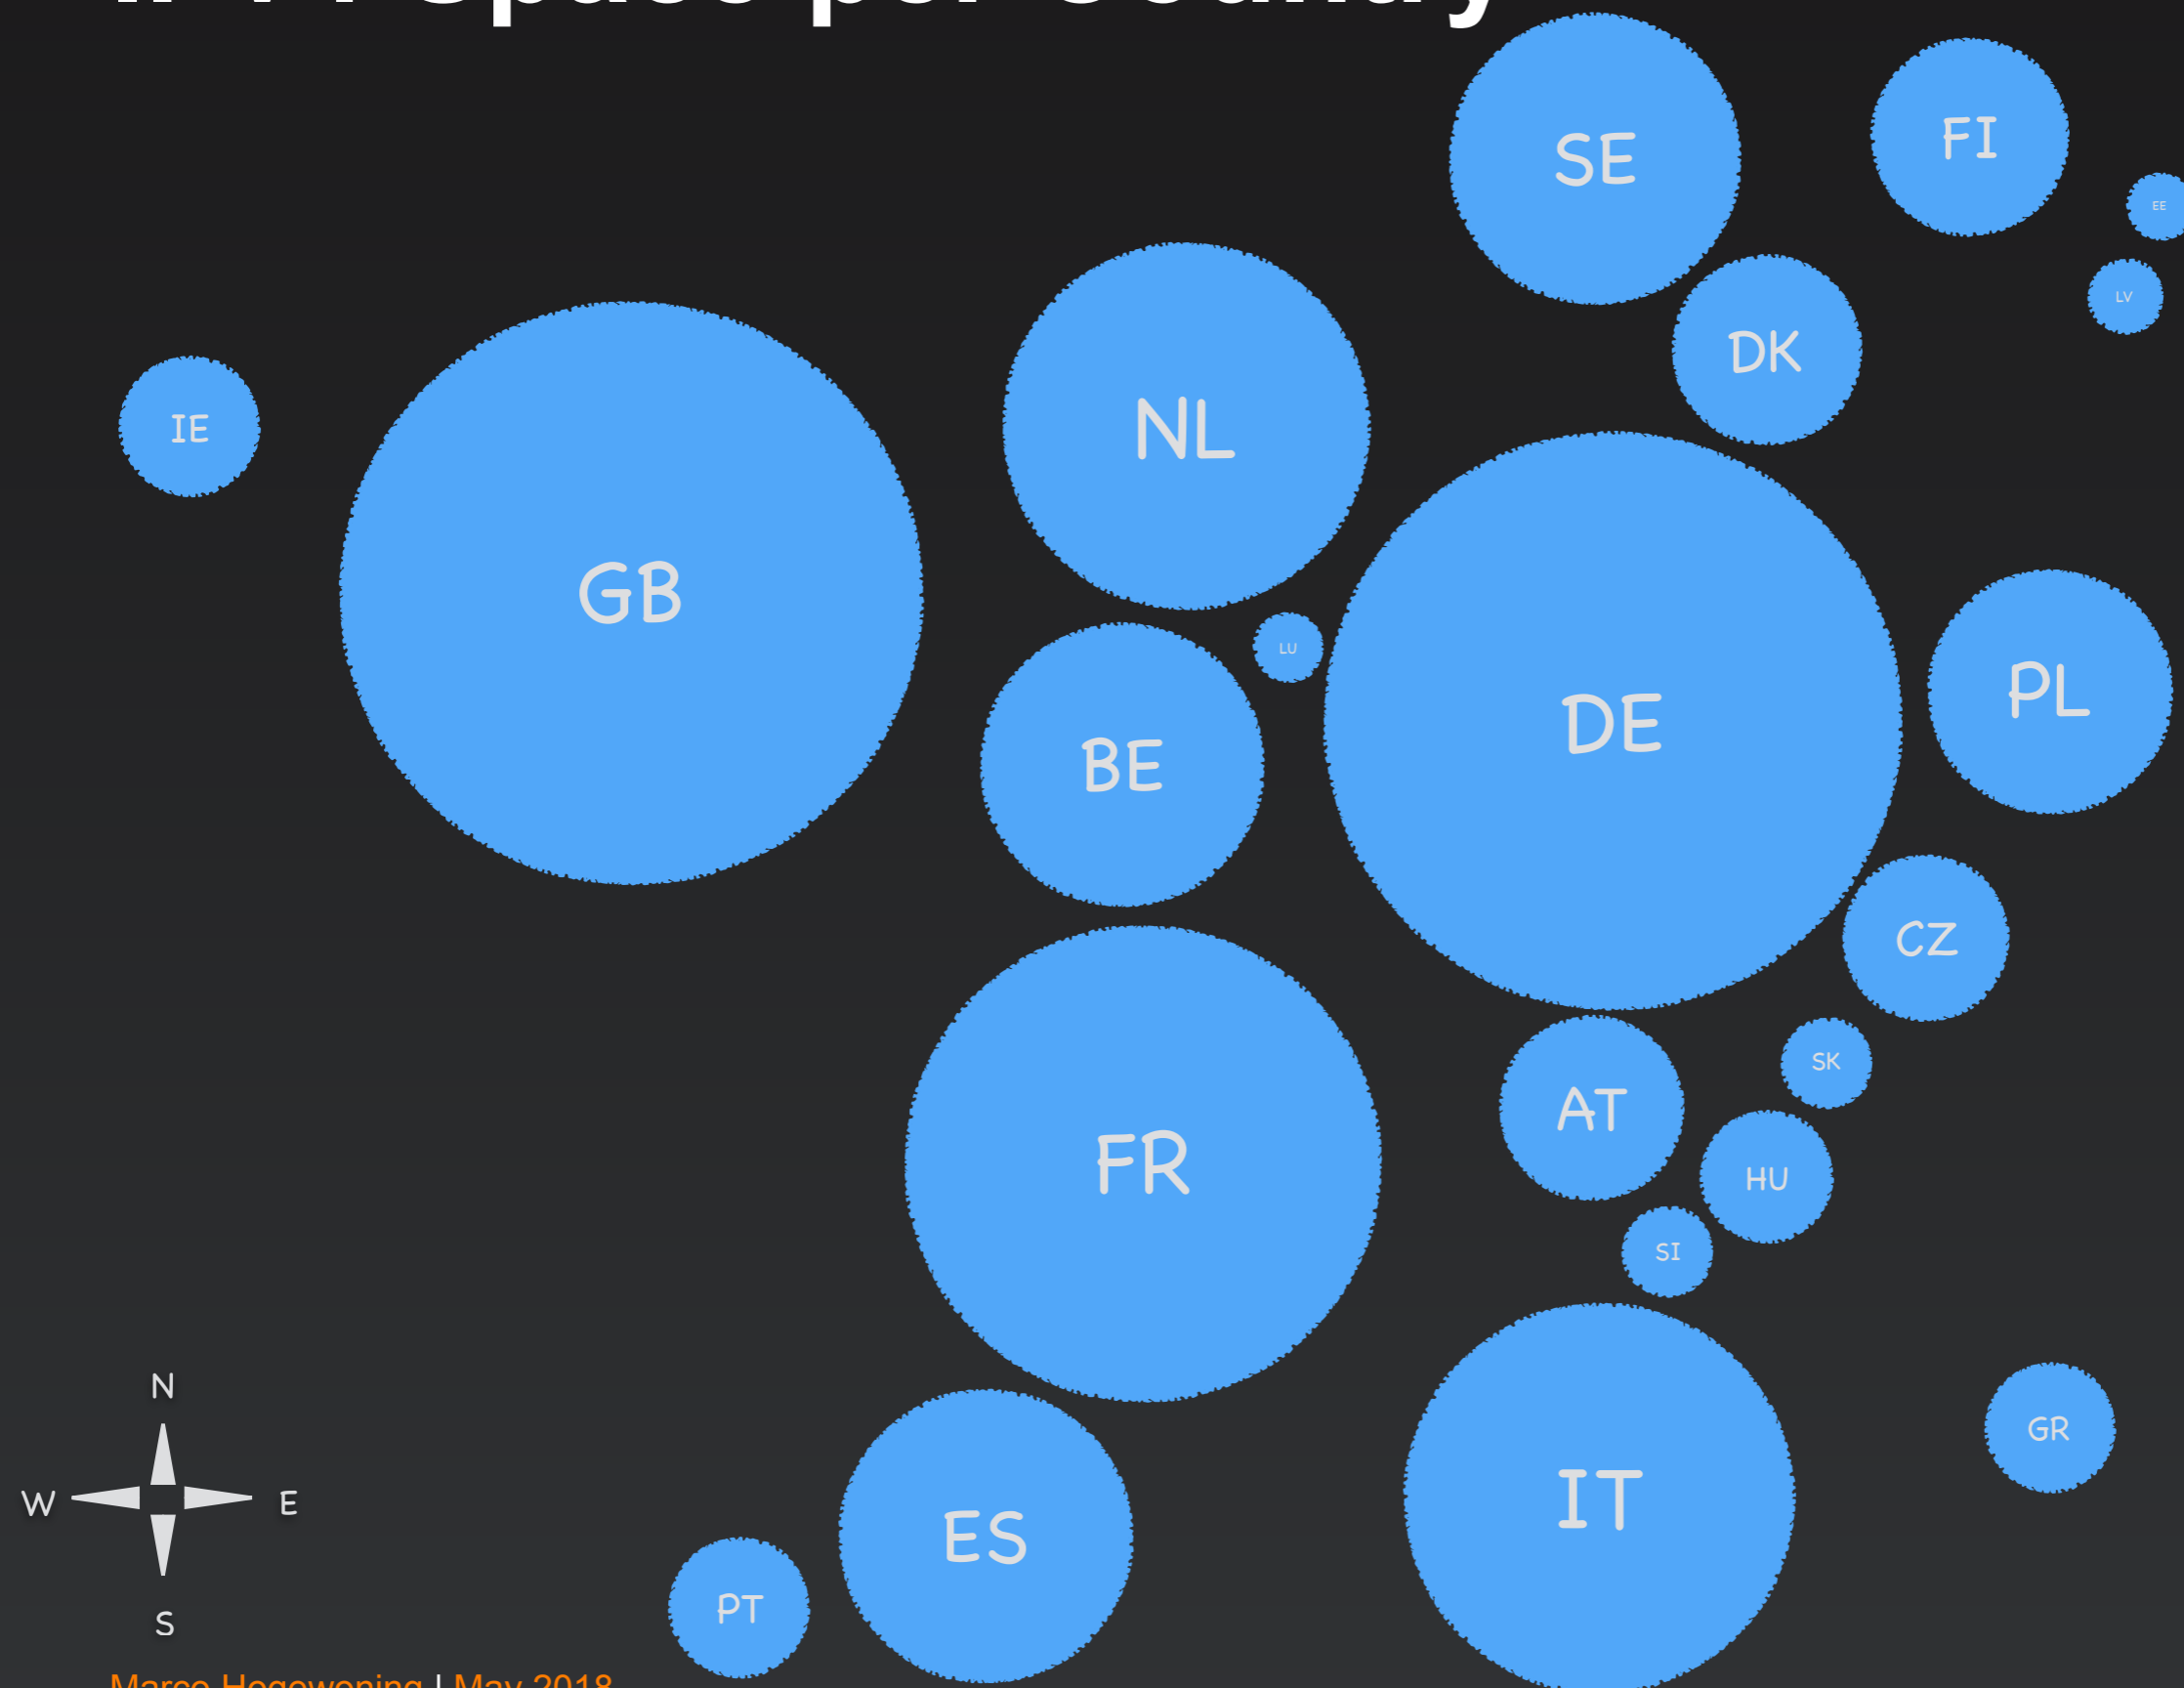

Country Level

Taking a step back

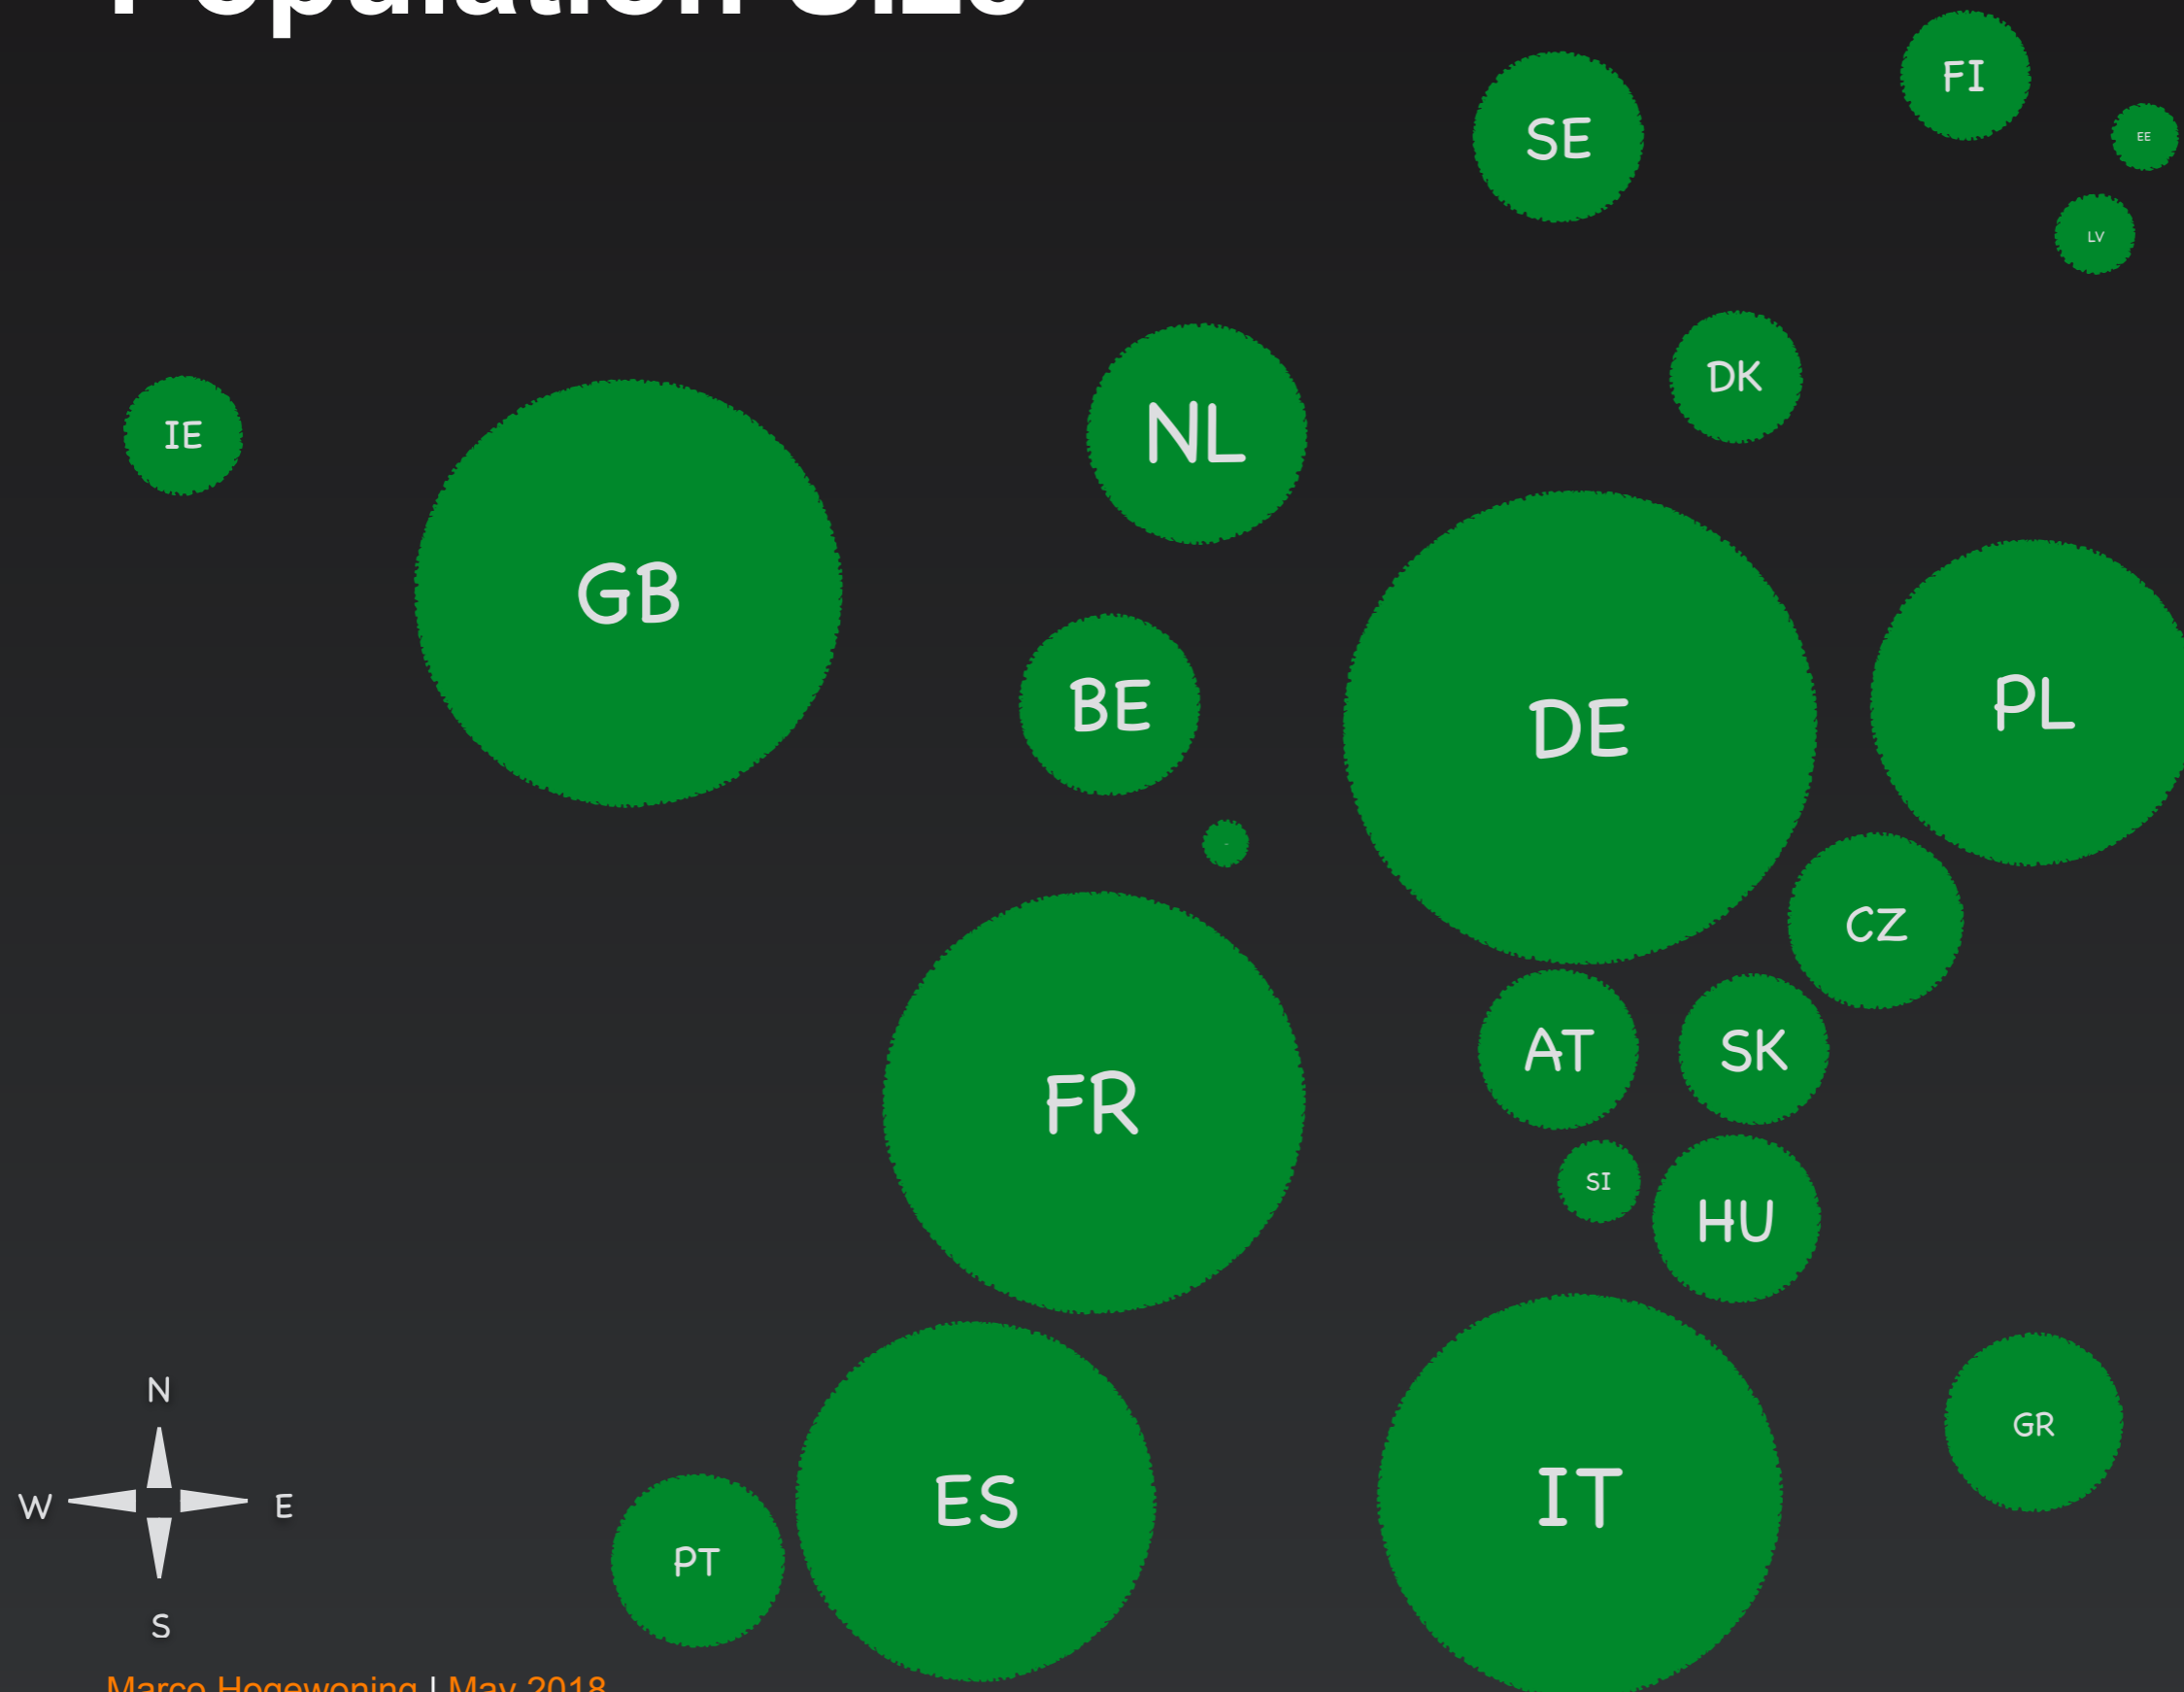

IPv4 Addresses per Country

IPv4 Space per Country

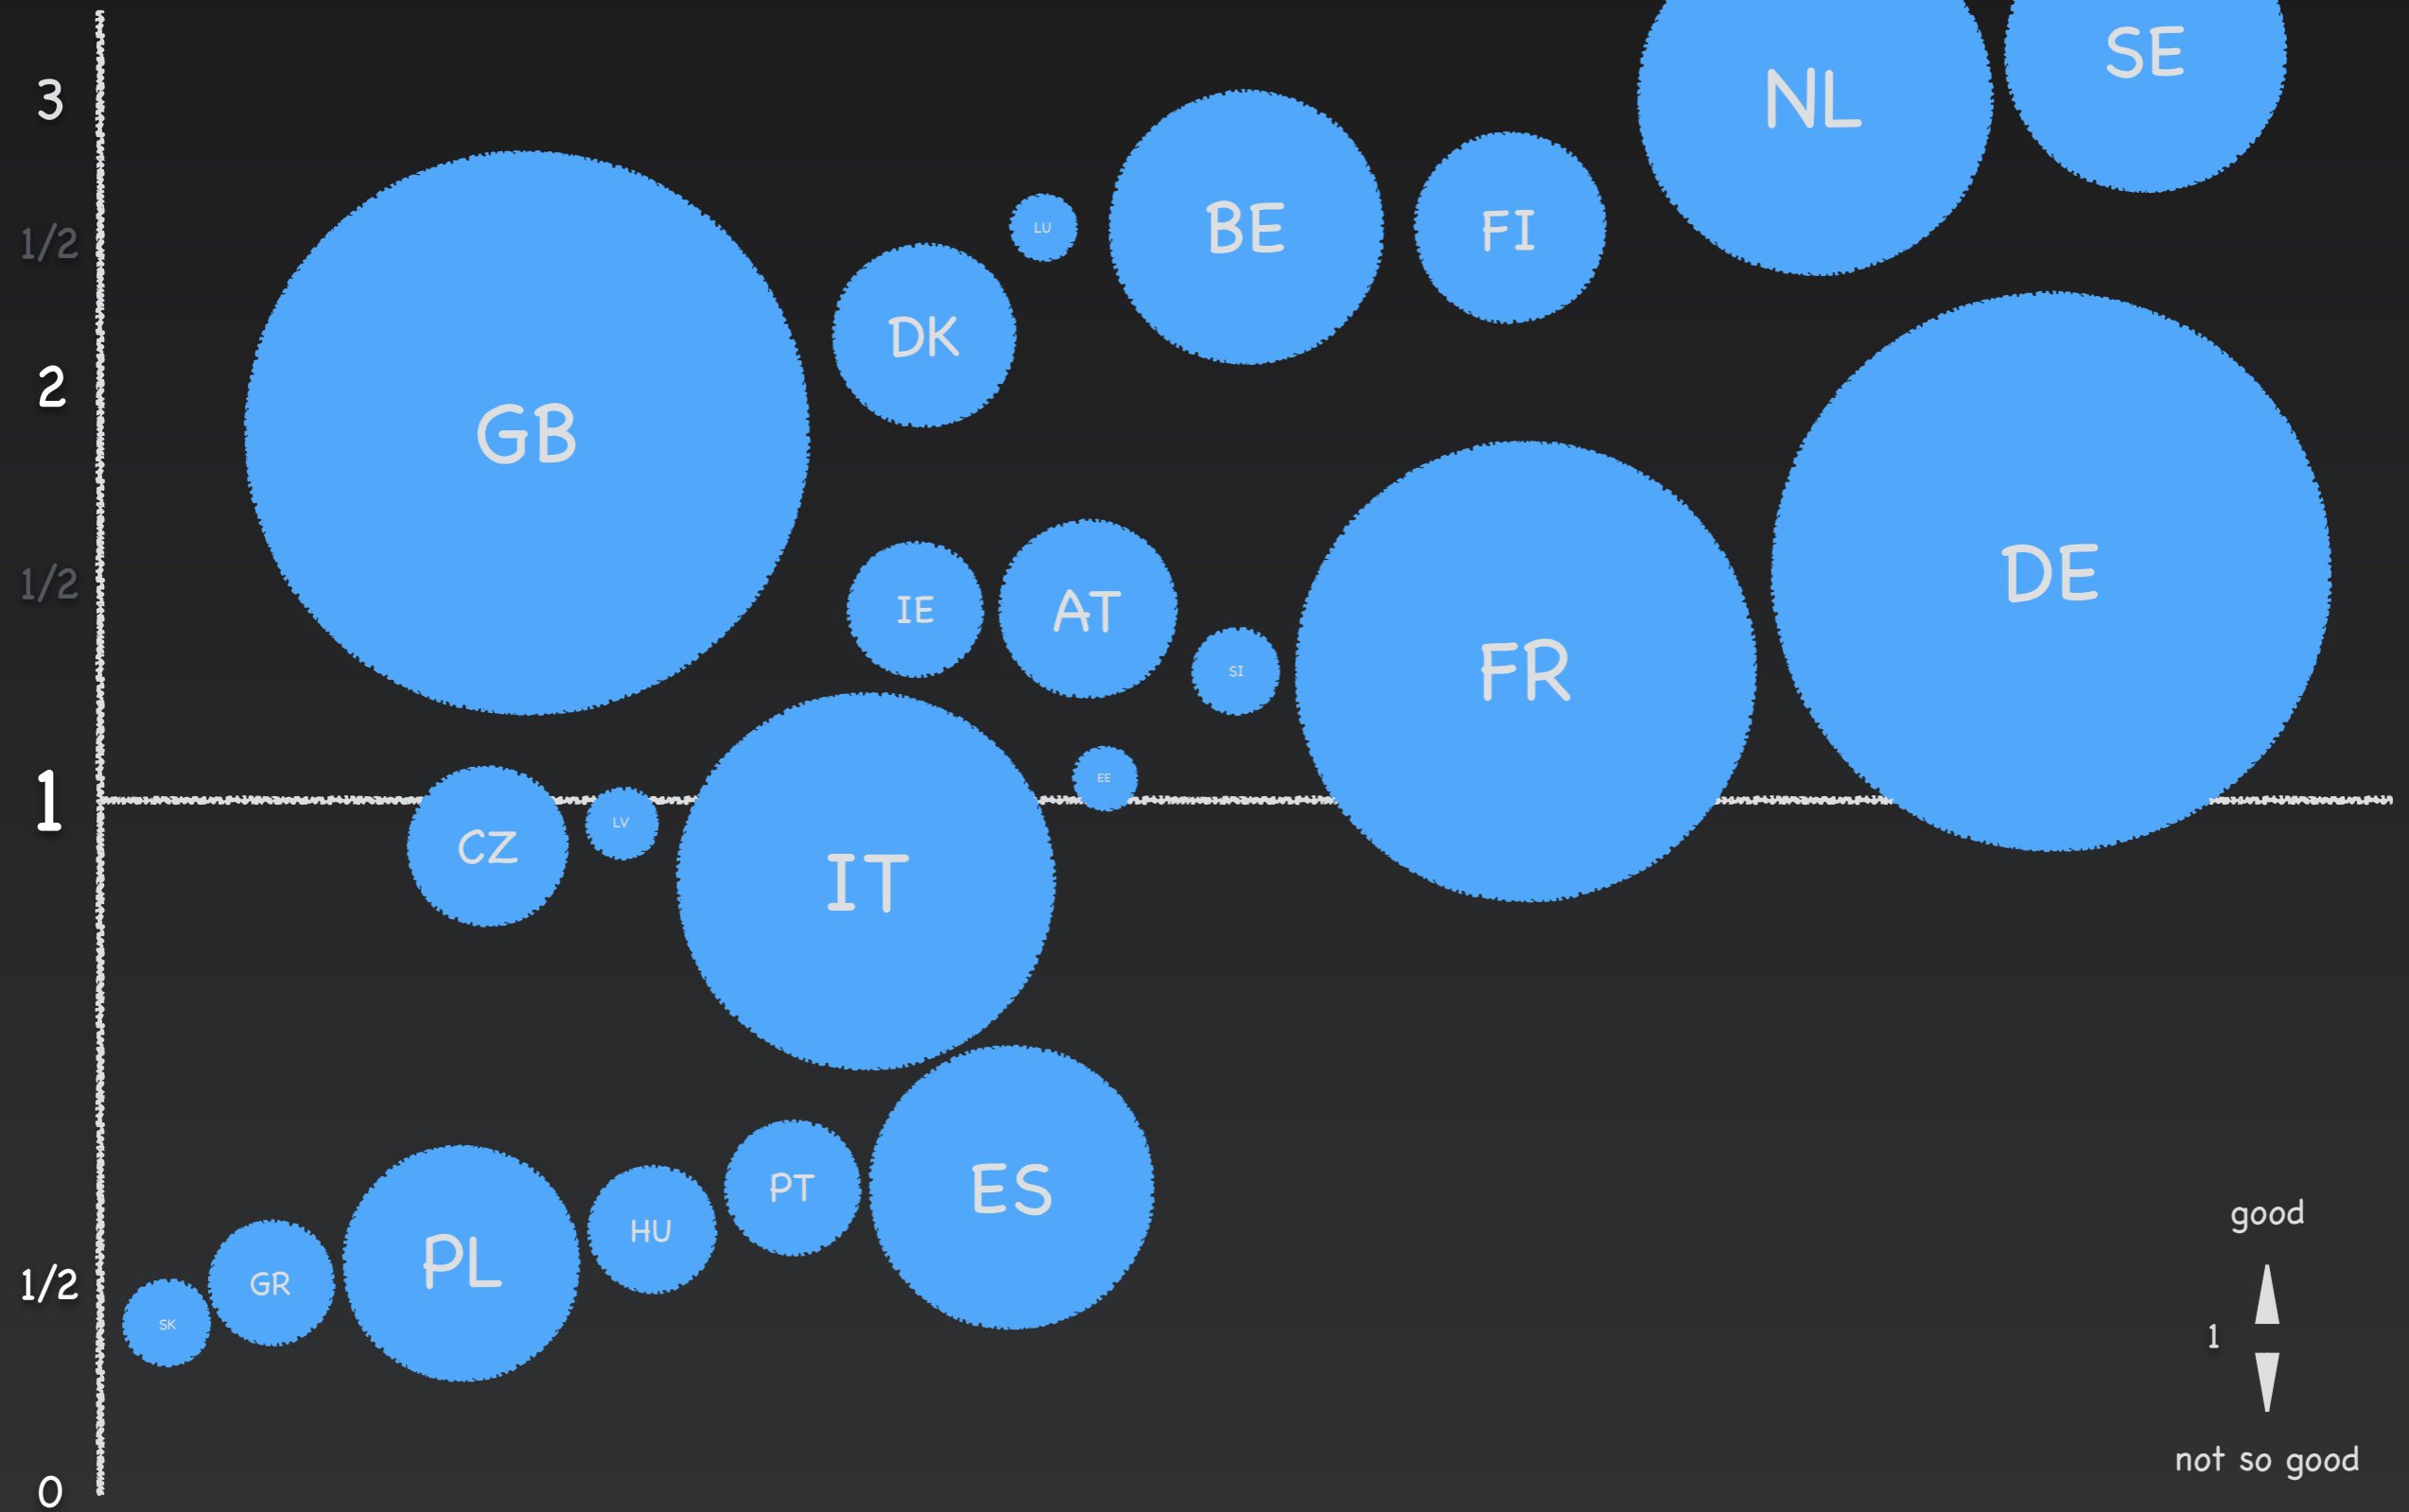

Population Size

IPv4 and Population

IPv4 per Capita

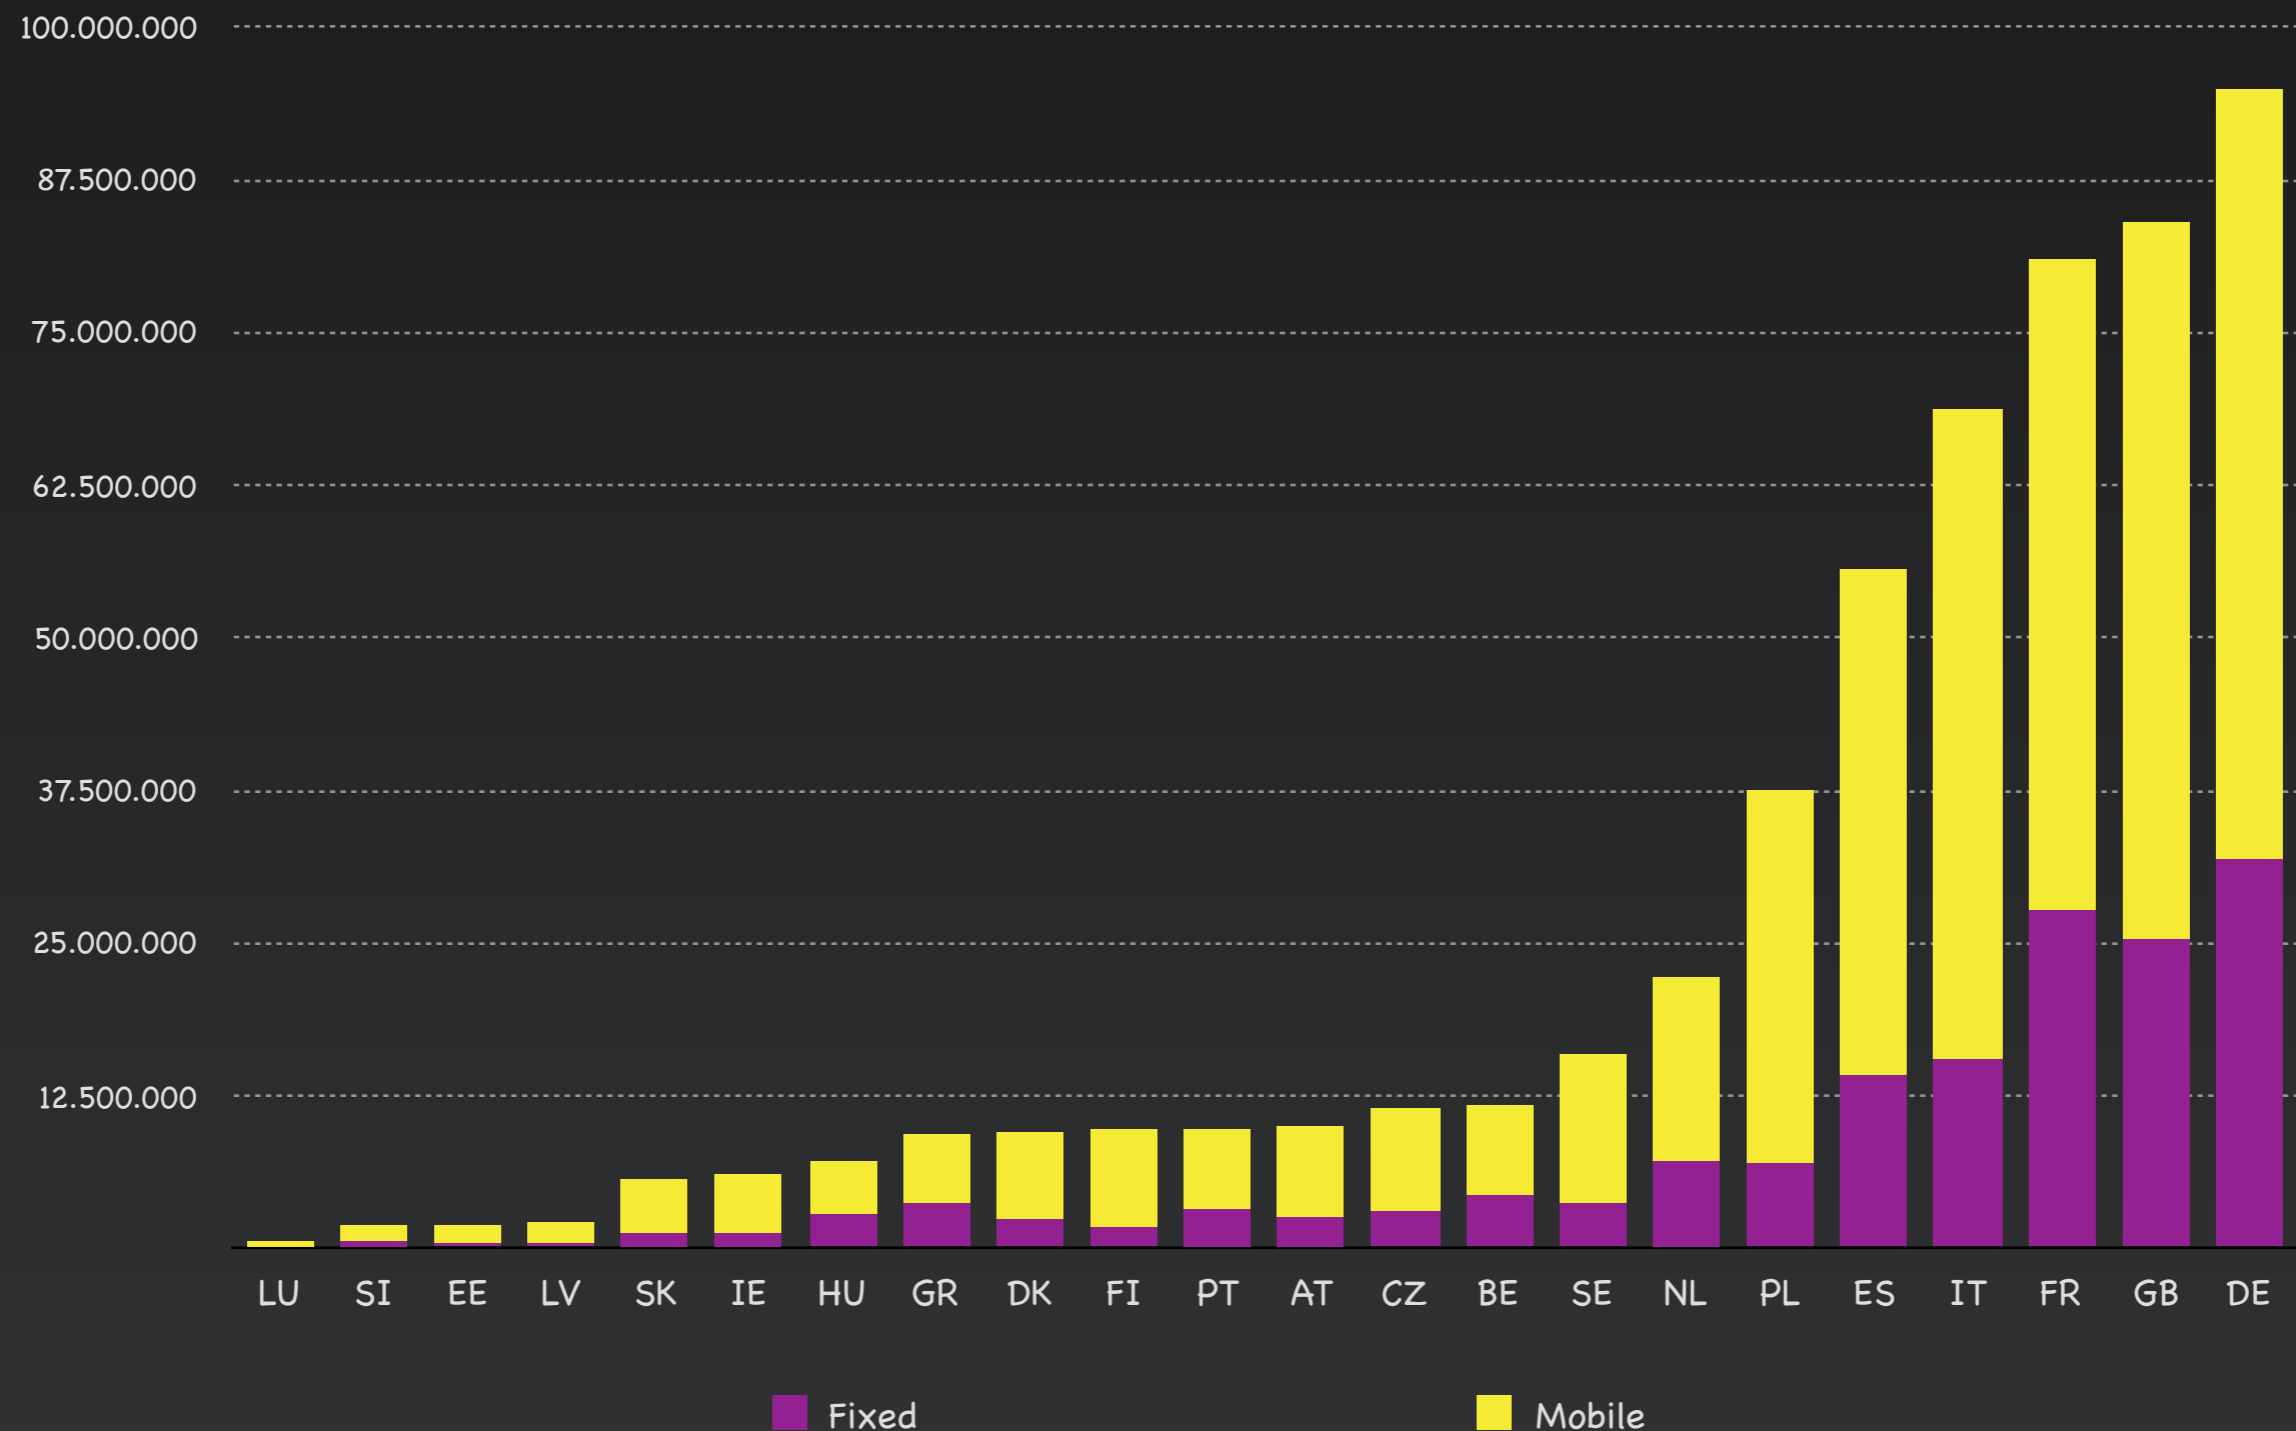

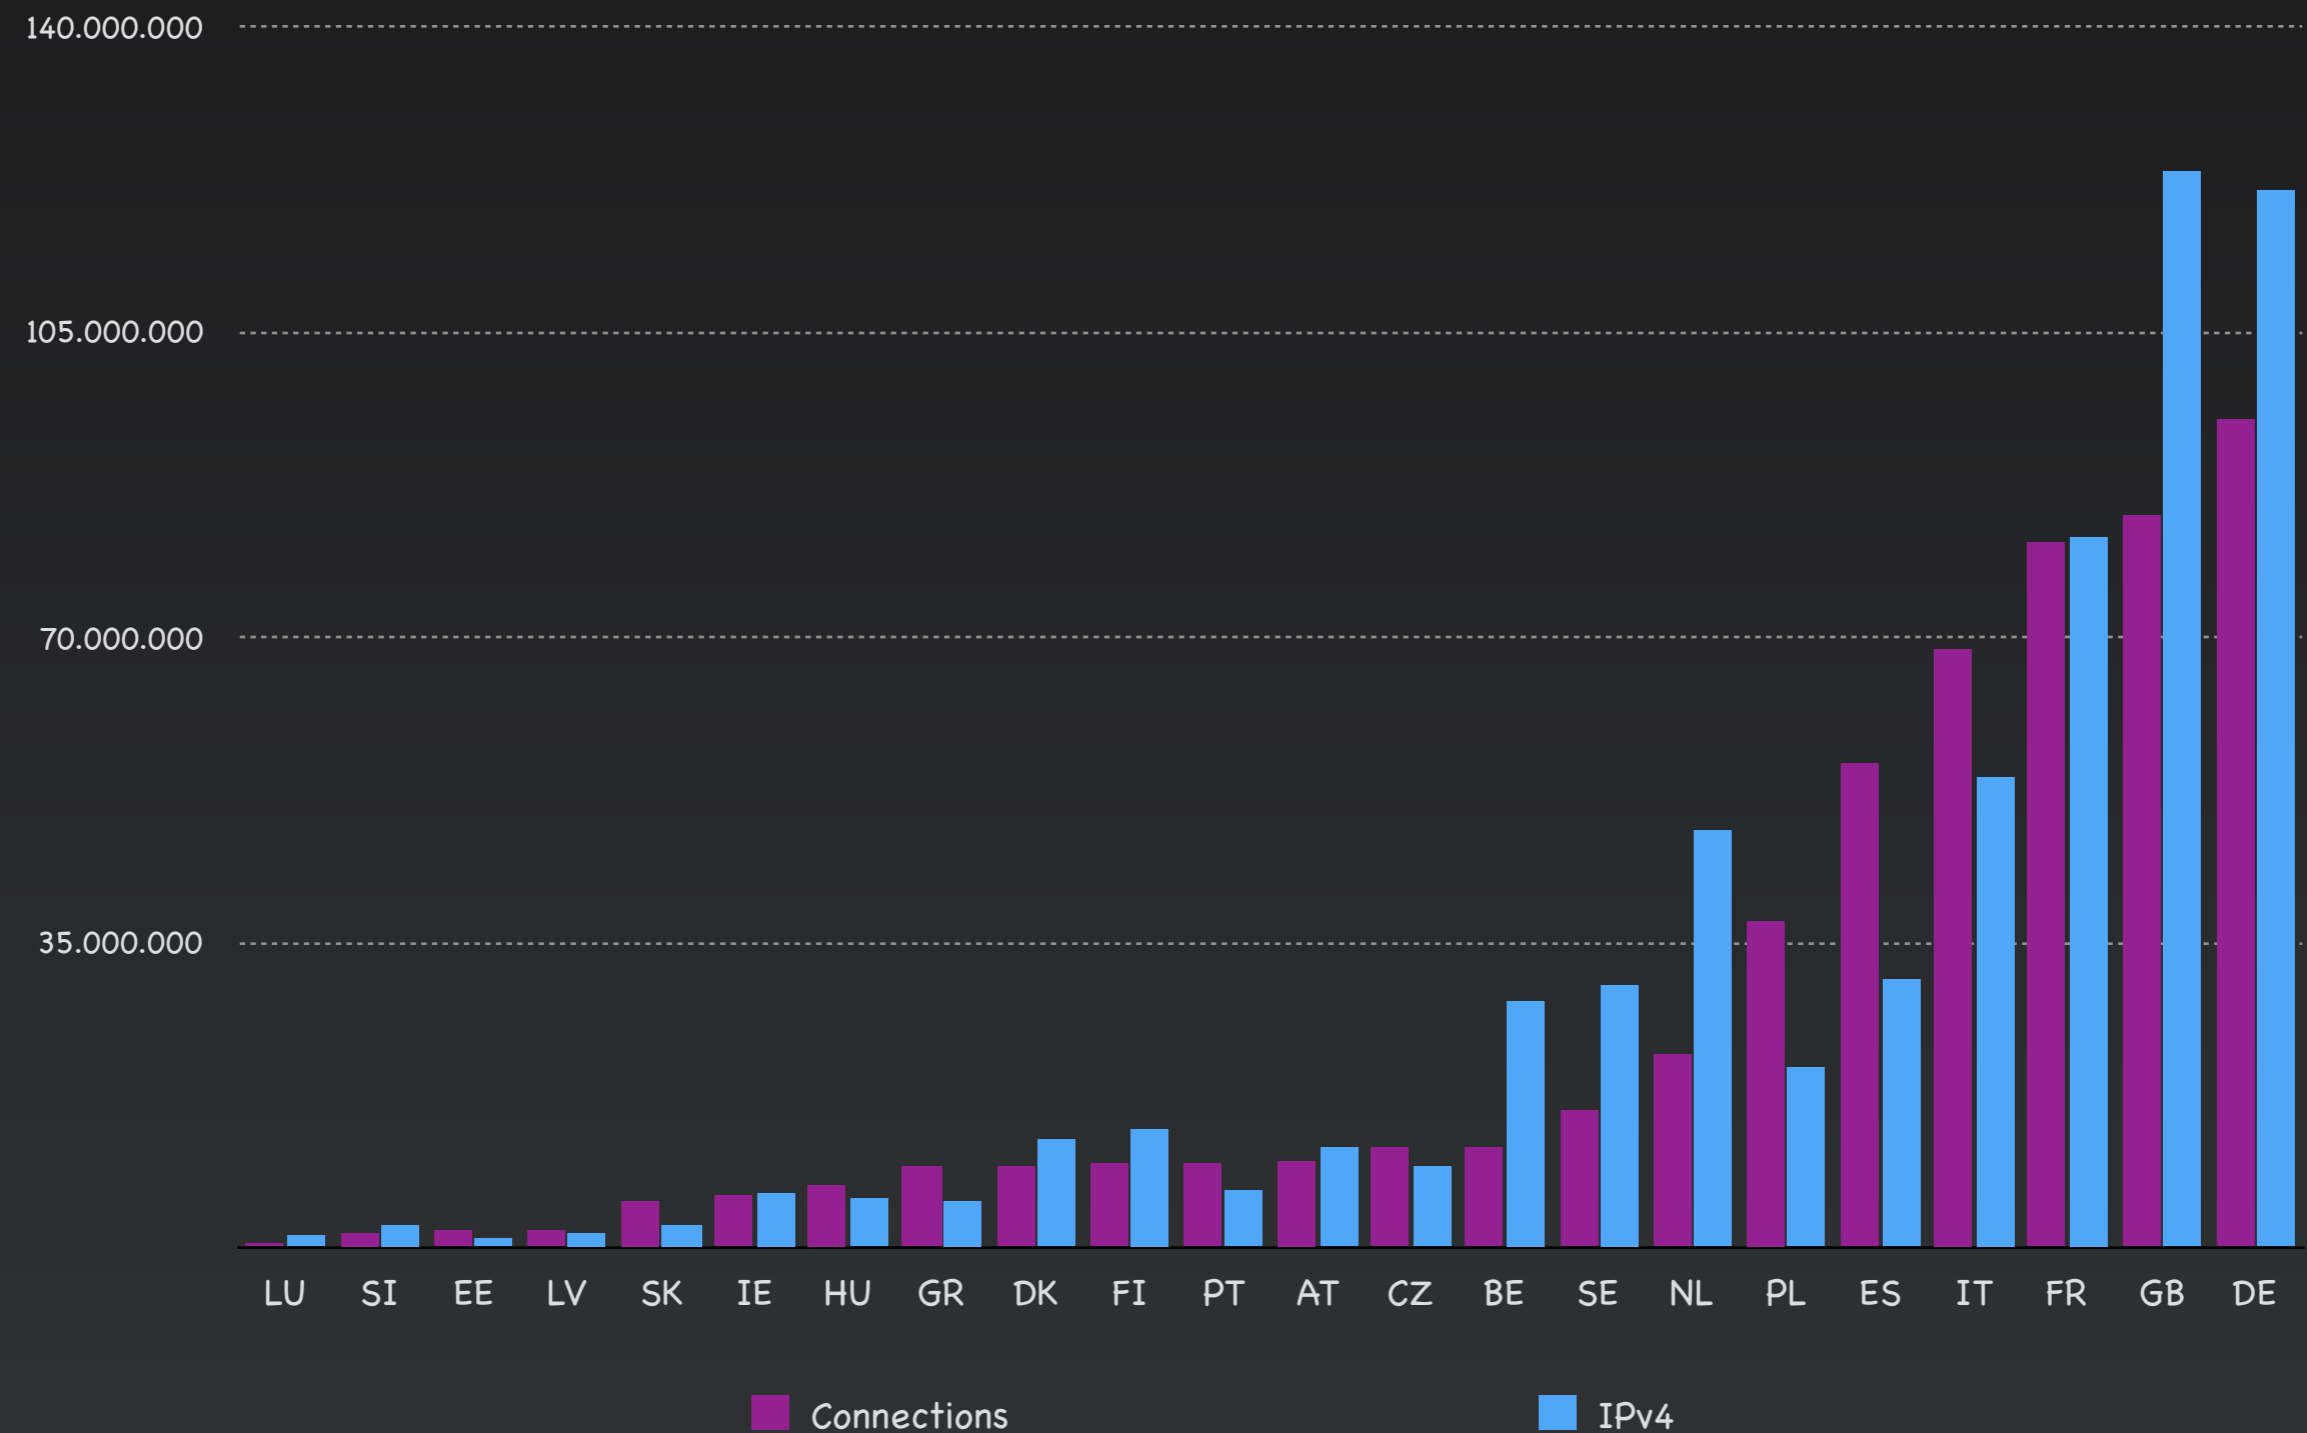

Sizing the Market

How many connections are there?

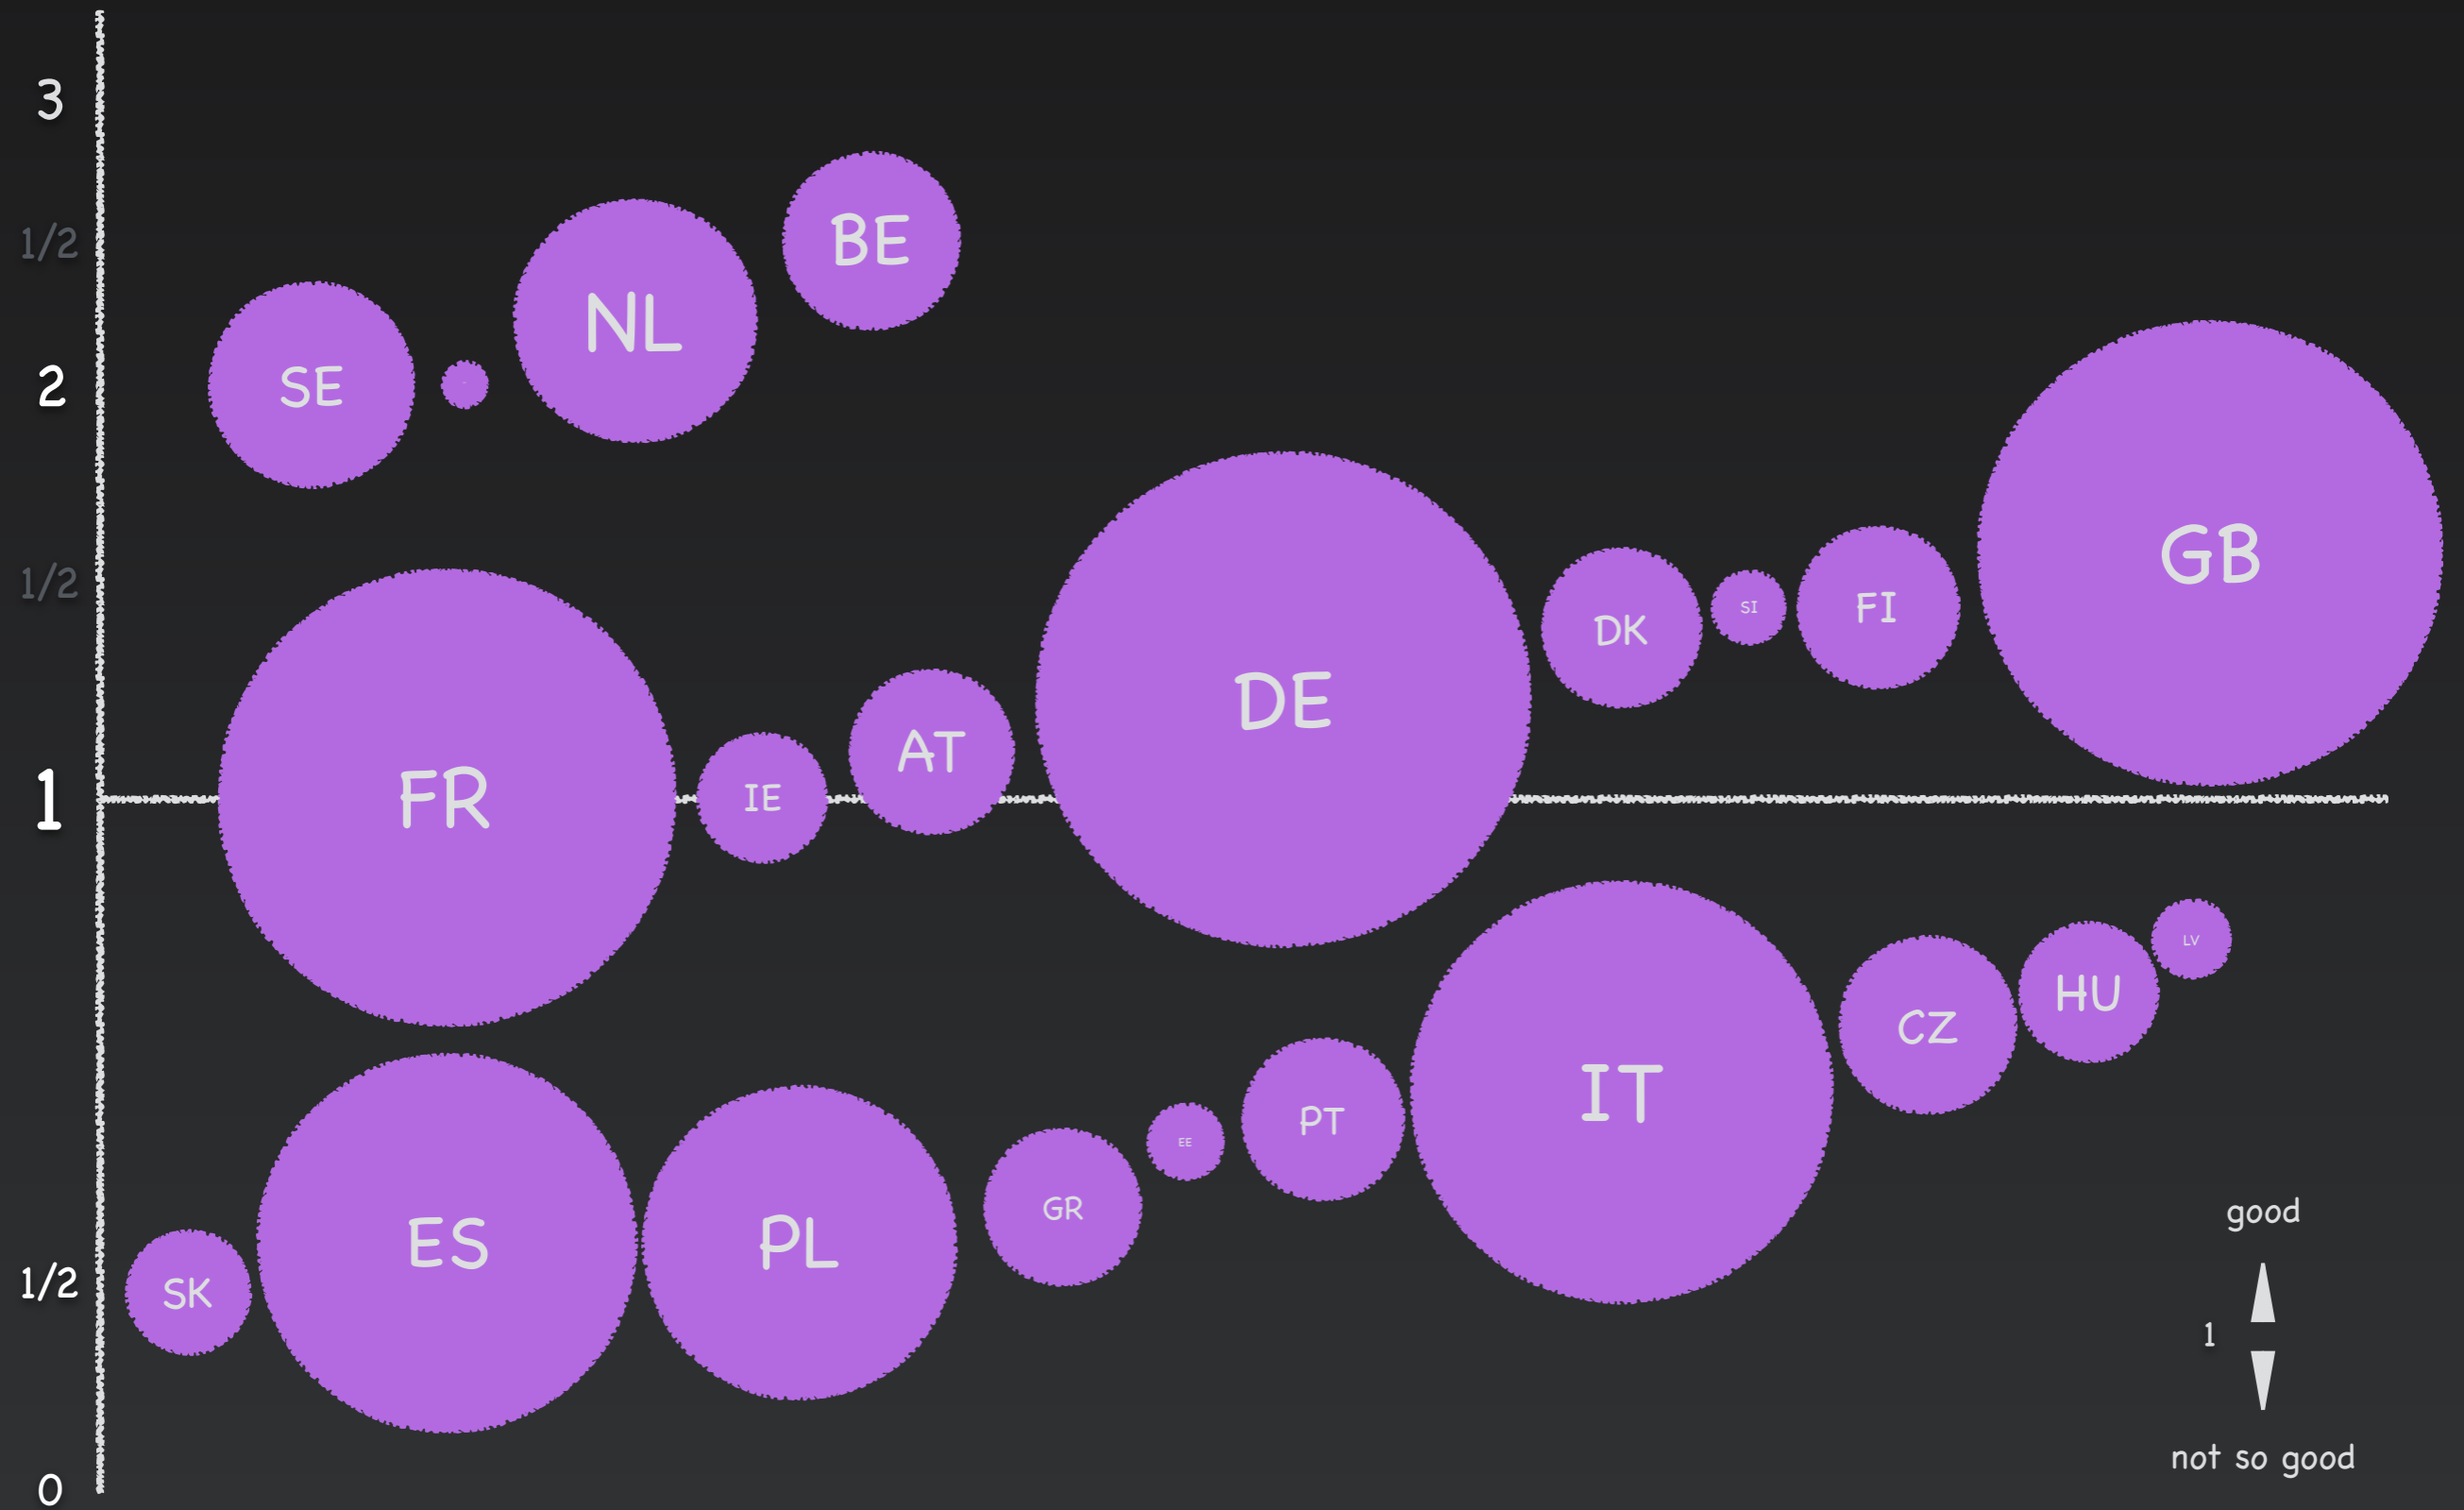

Number of Broadband Connections

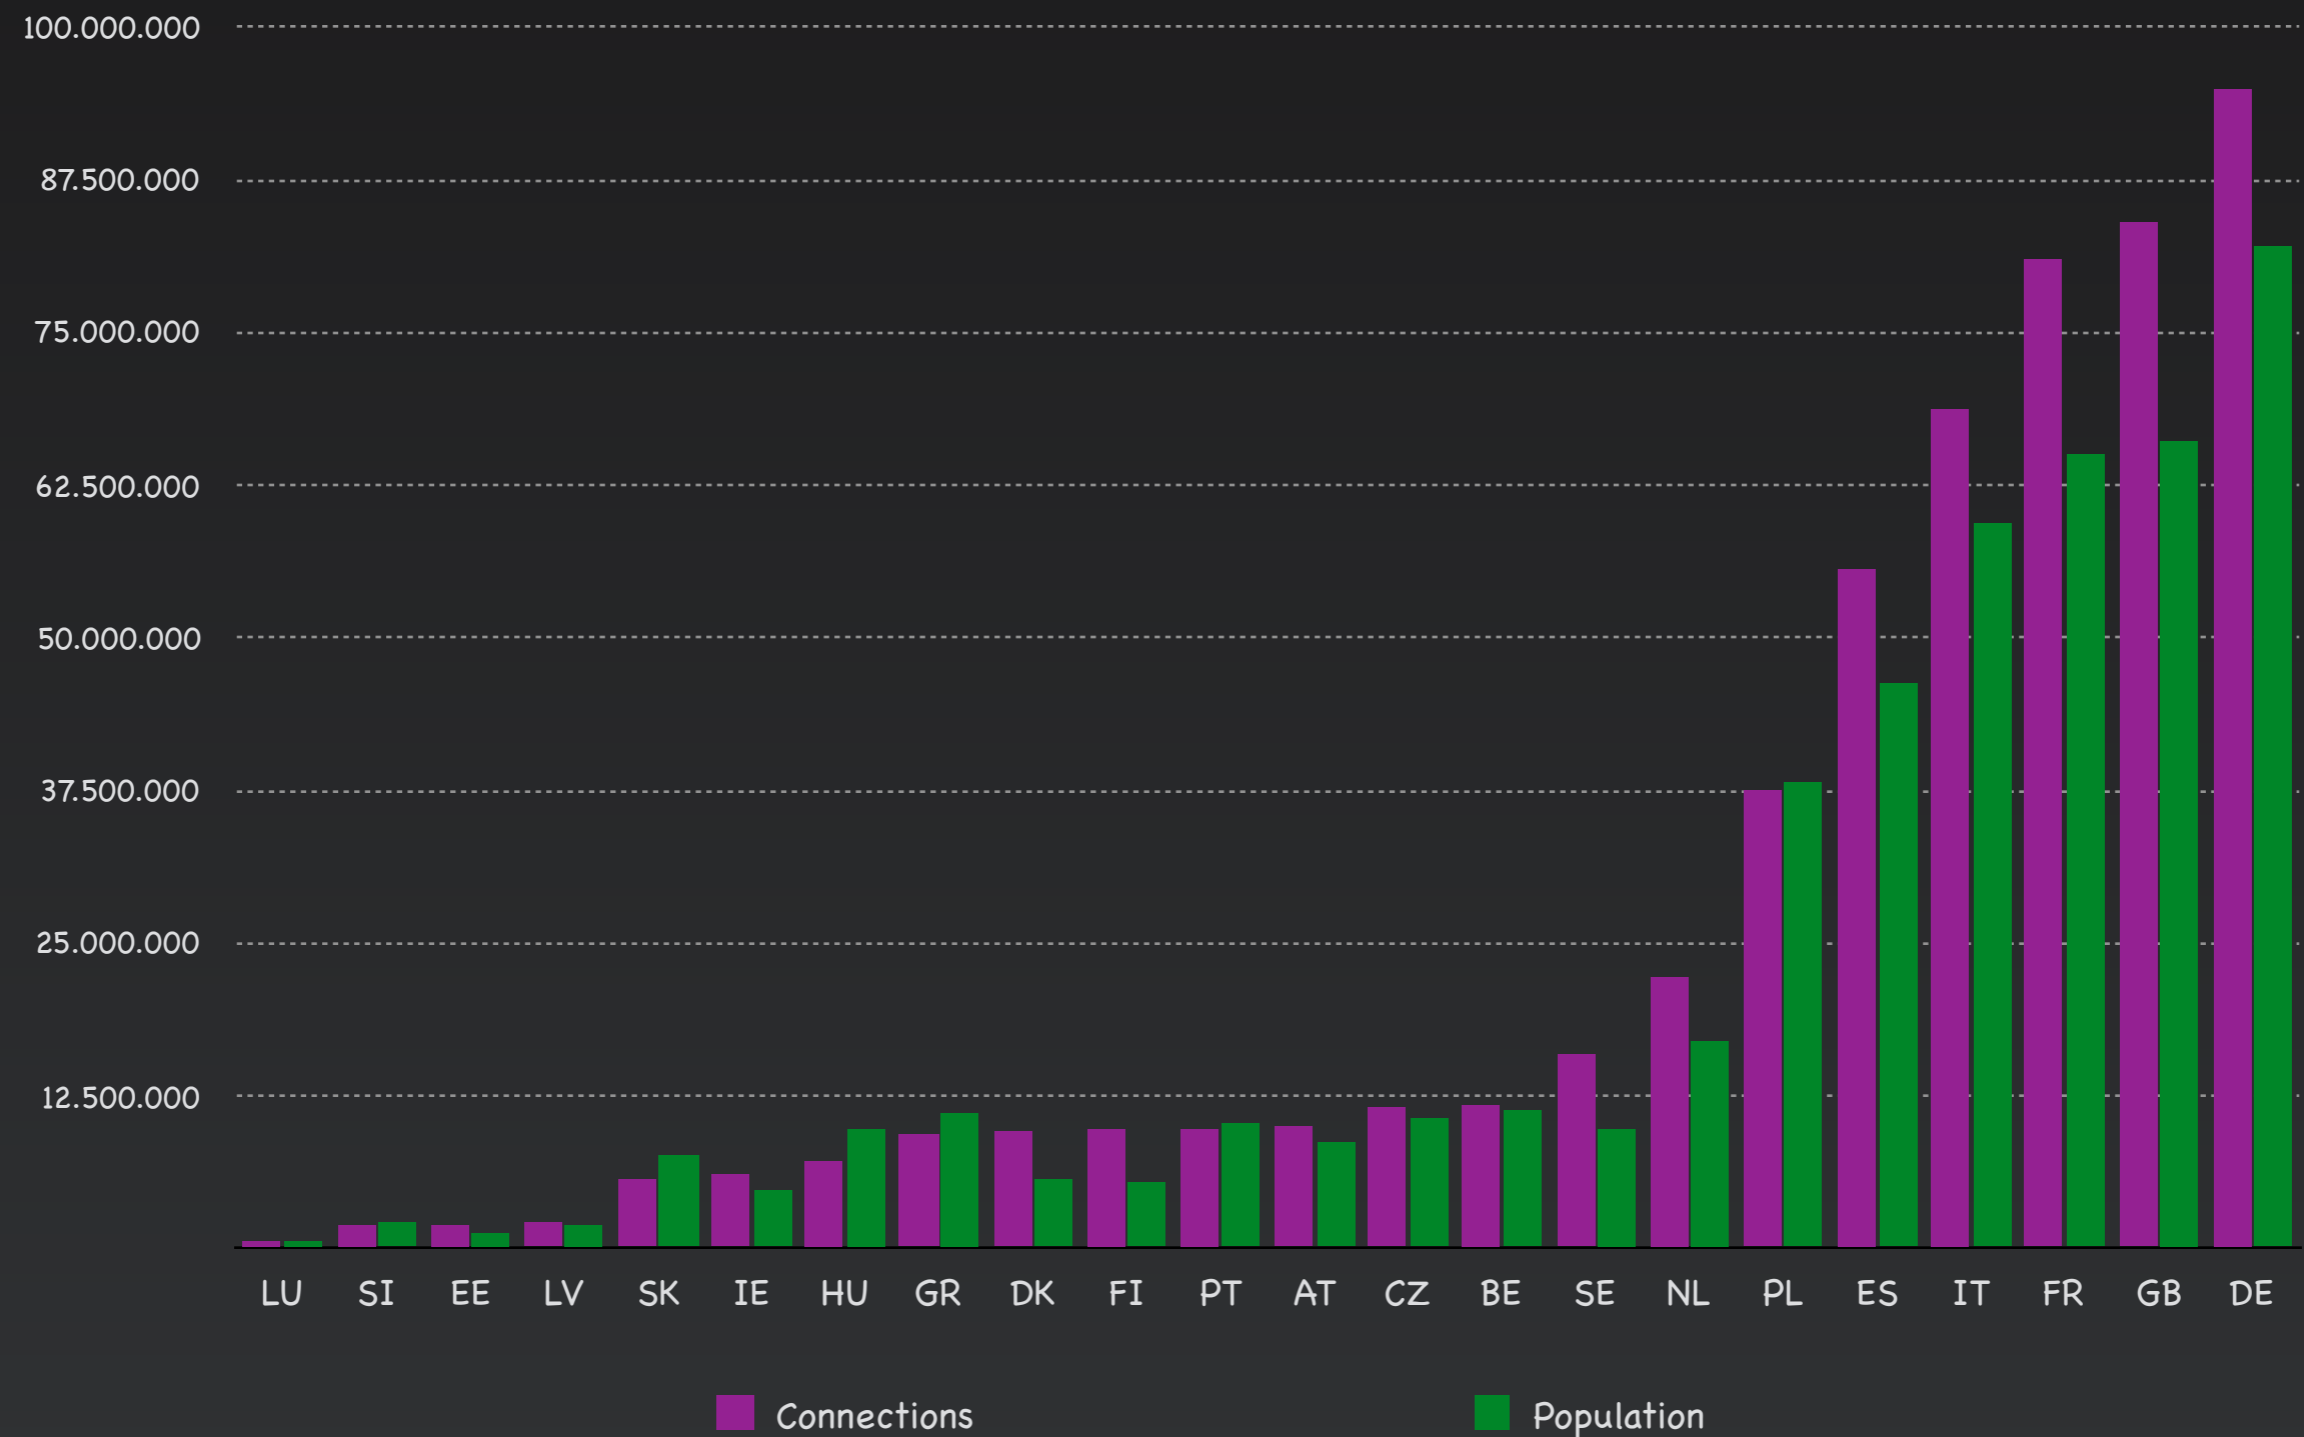

Connections and IPv4

IPv4 per Connection

Connections and Population

Peeking into the Future

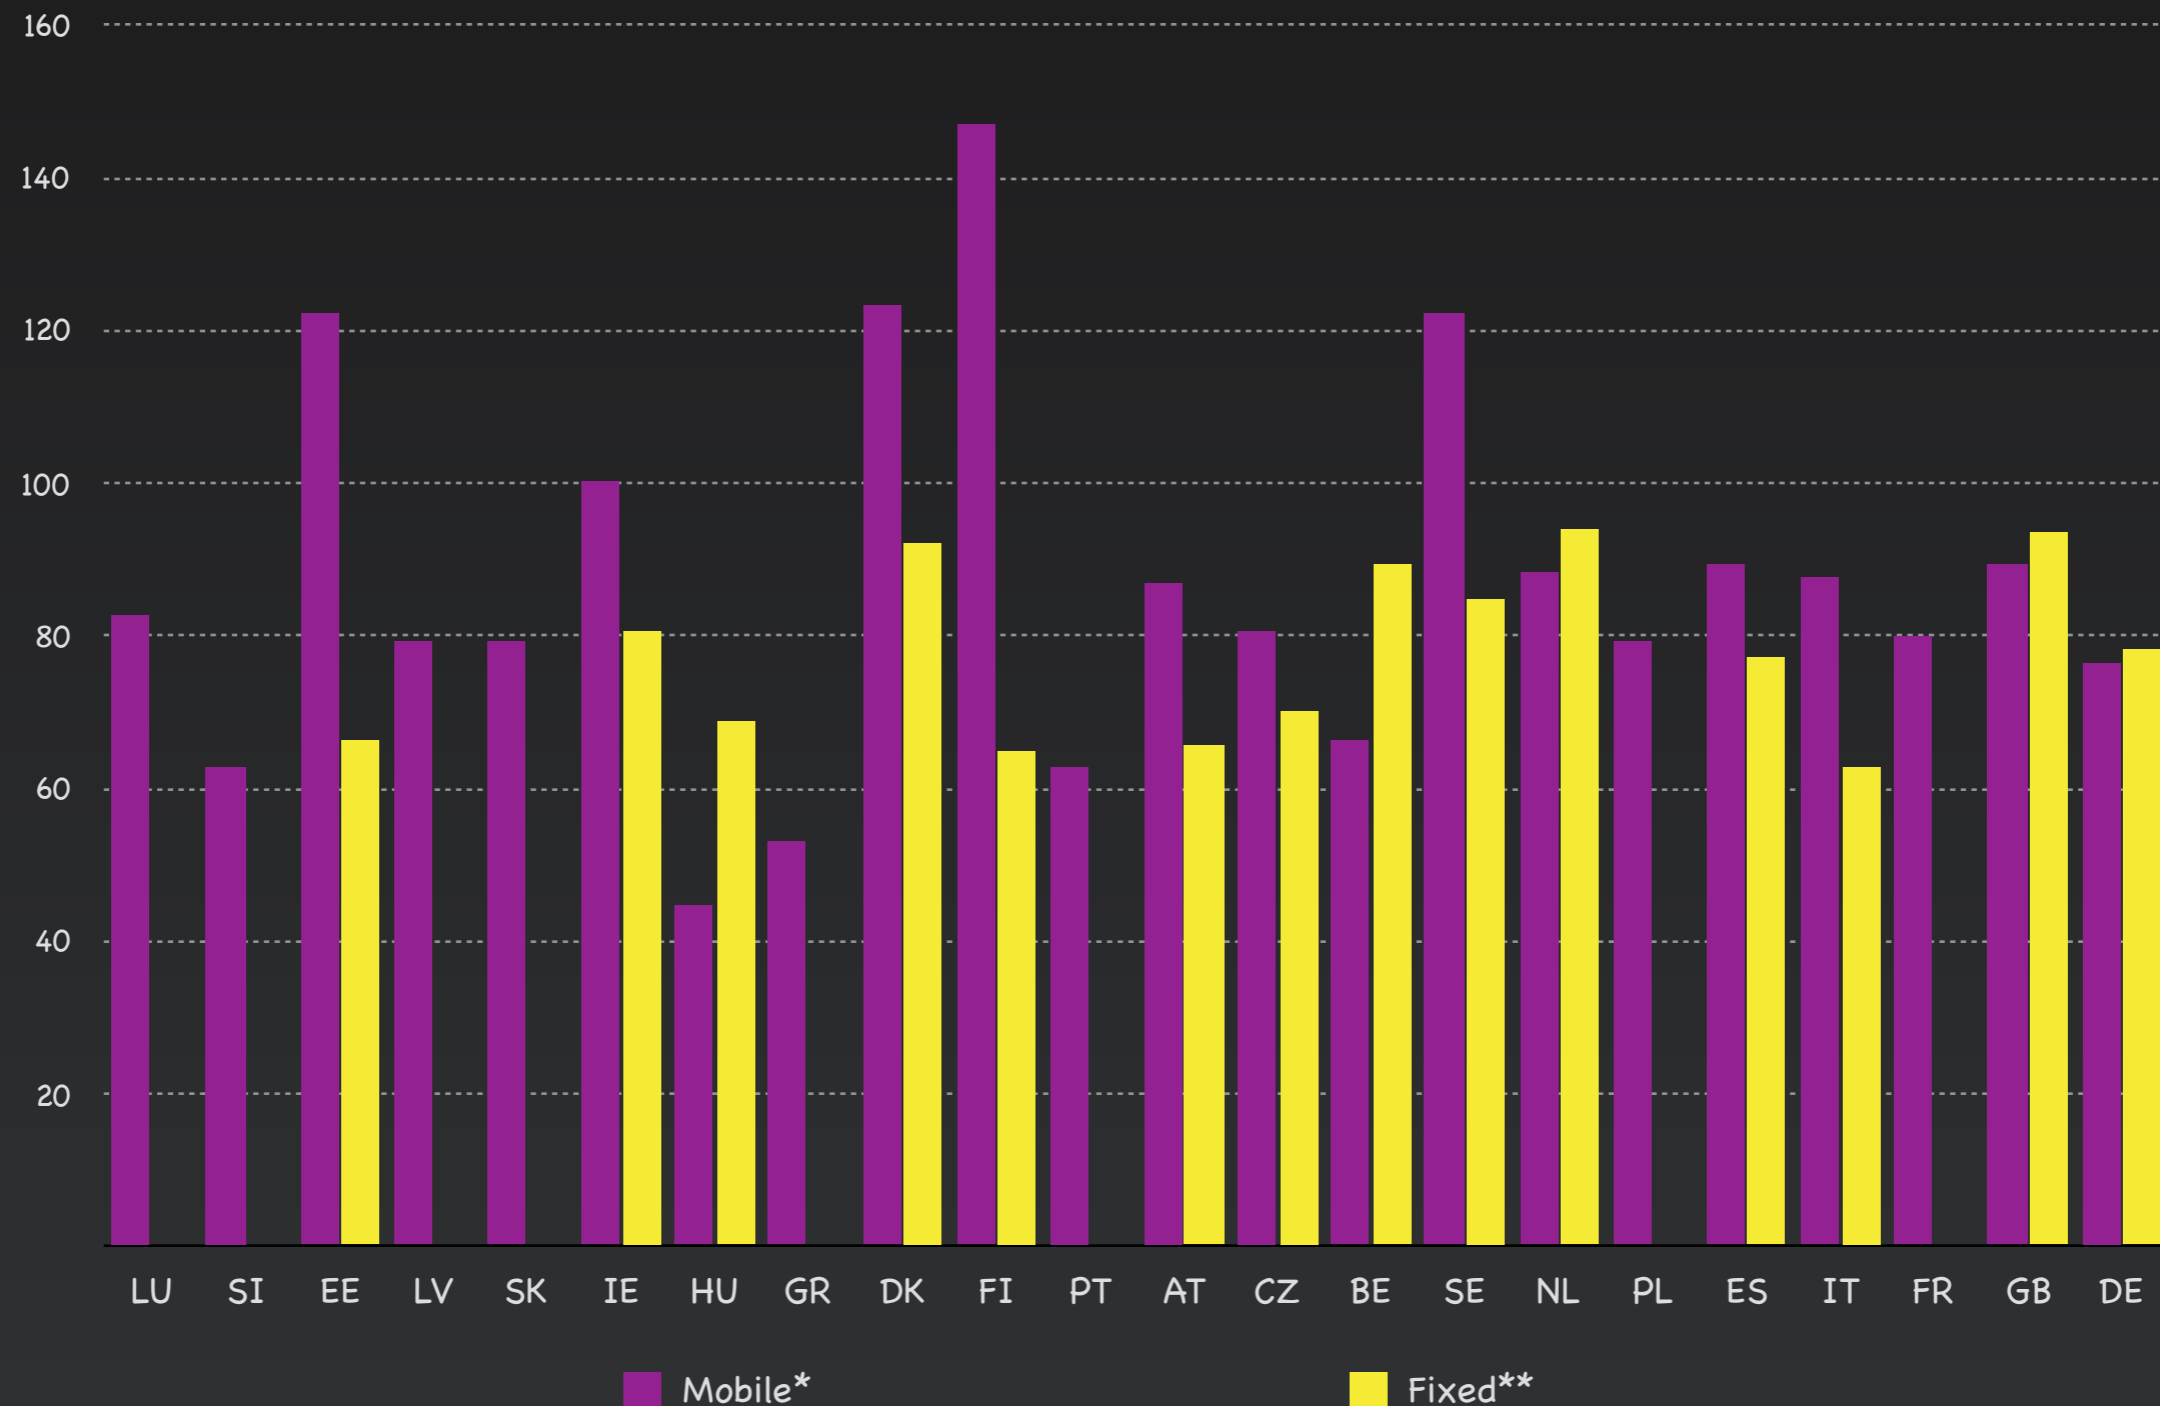

Exploring with extrapolation

Ubiquitous Internet

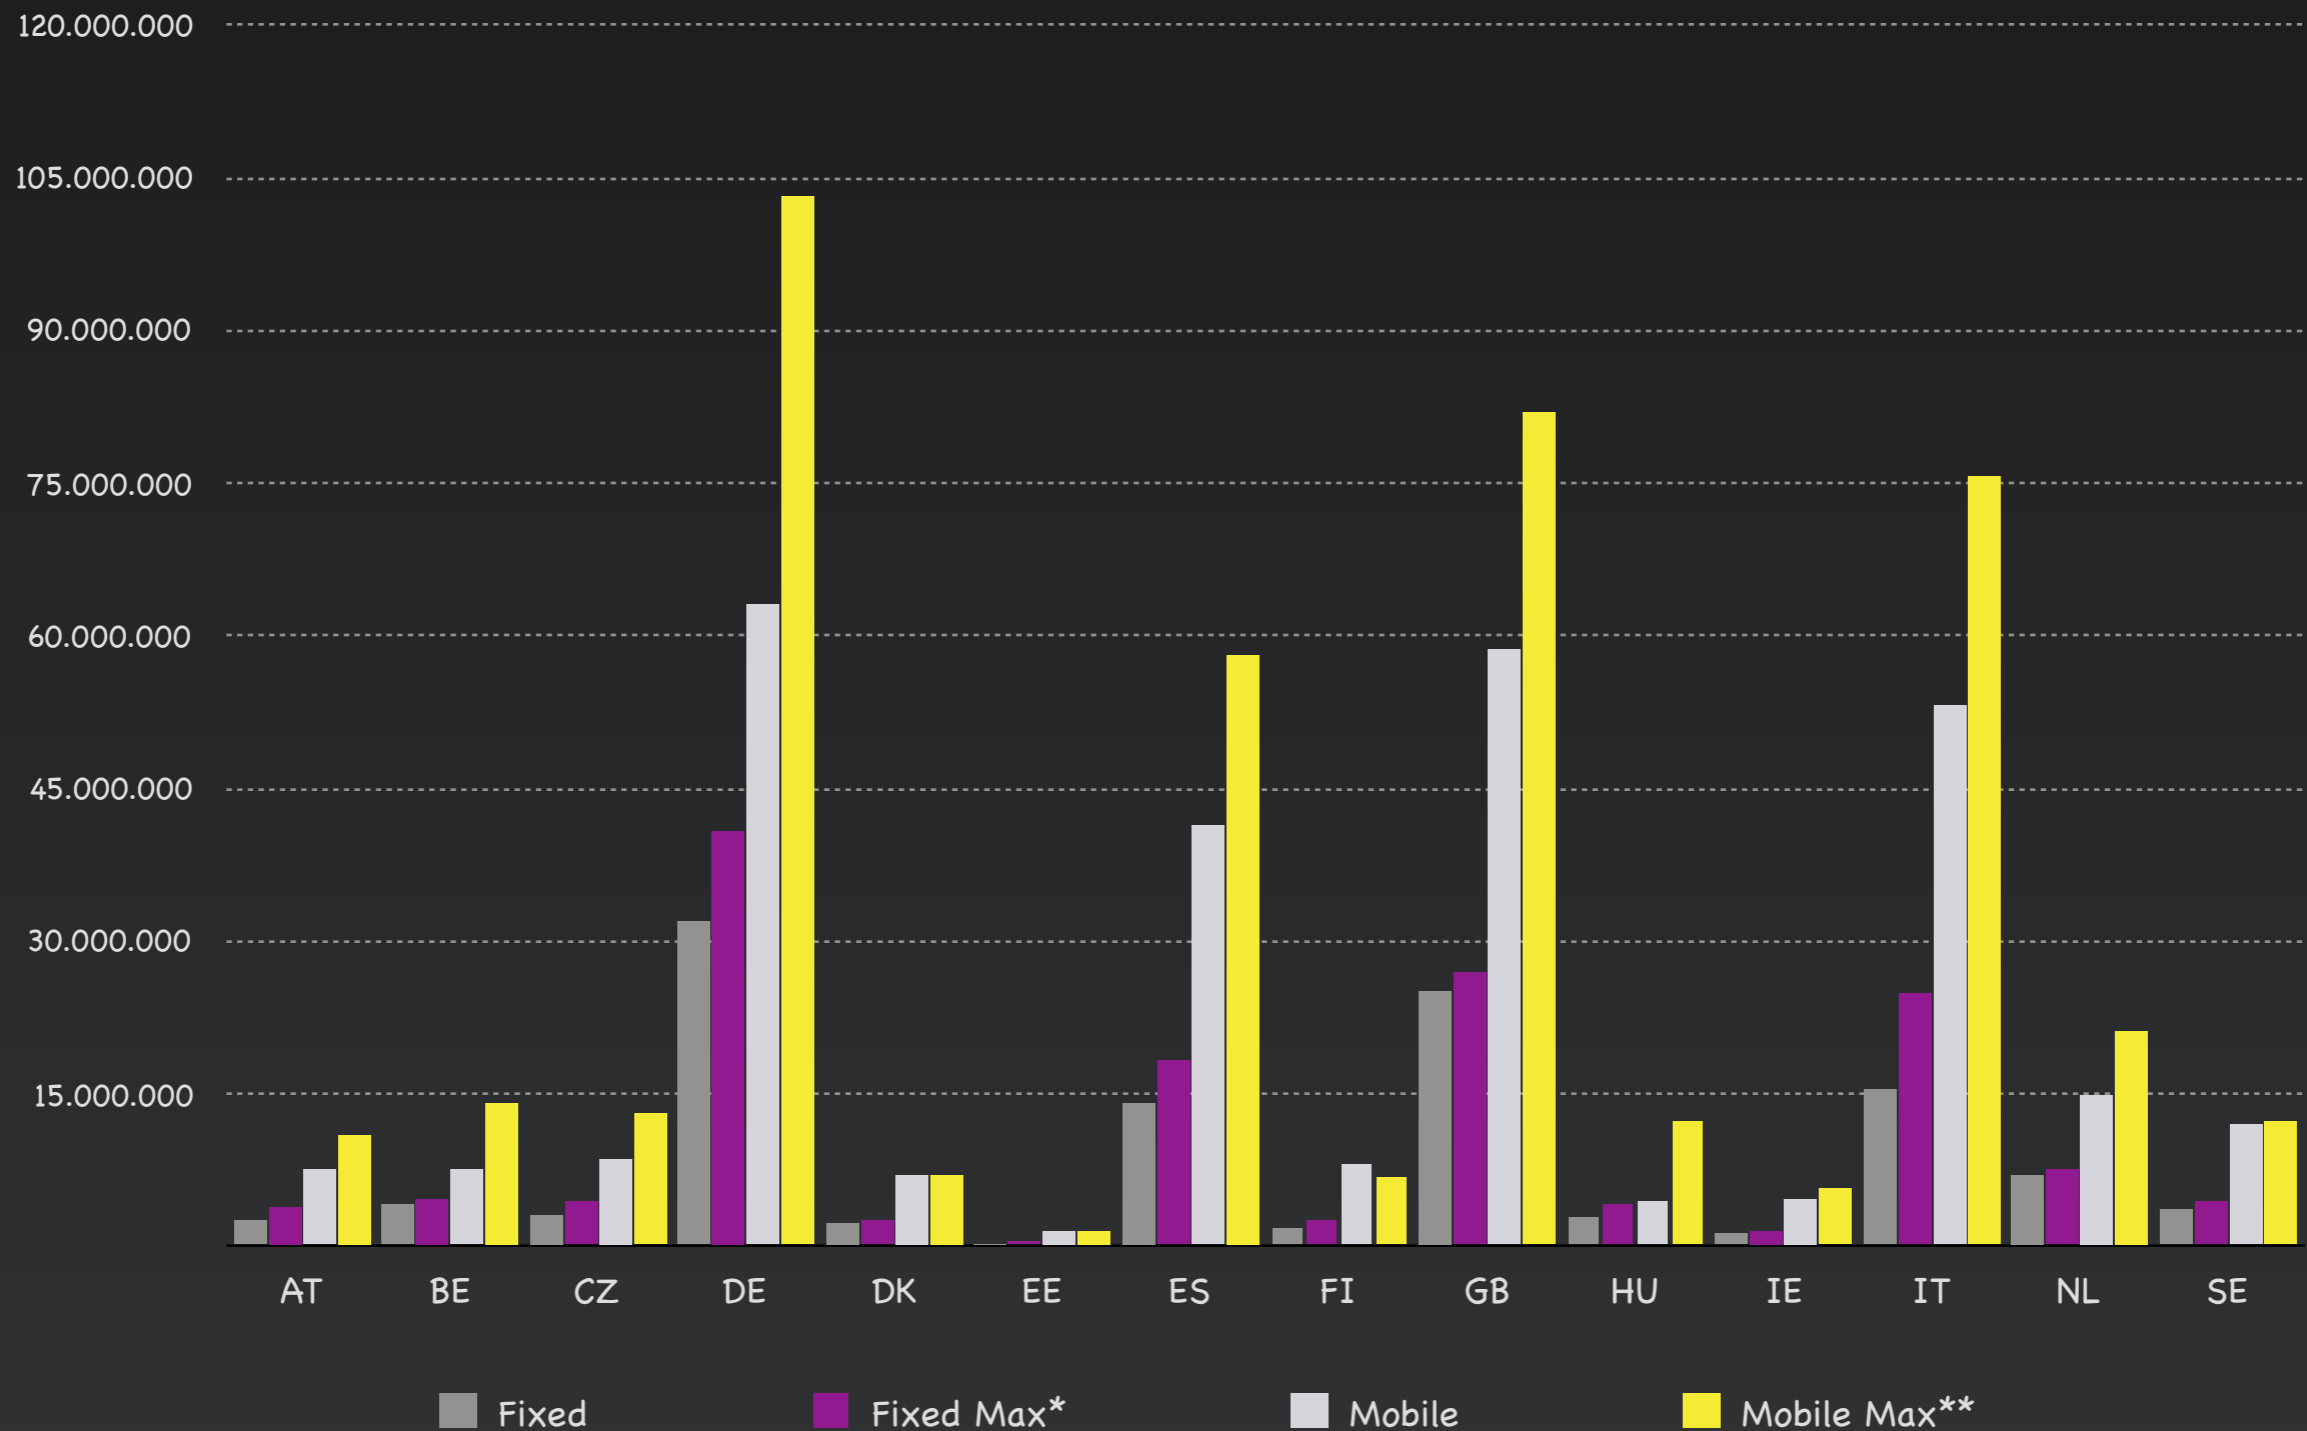

- What if everybody gets an Internet connection
 - You are likely to share the home (fixed) connection
 - “One fixed line per household”
 - Everybody gets a mobile phone (maybe two)
- Going to ignore some parts of the market:
 - Enterprise and SME
 - Machine-to-machine
 - Data centre and public/utility networks

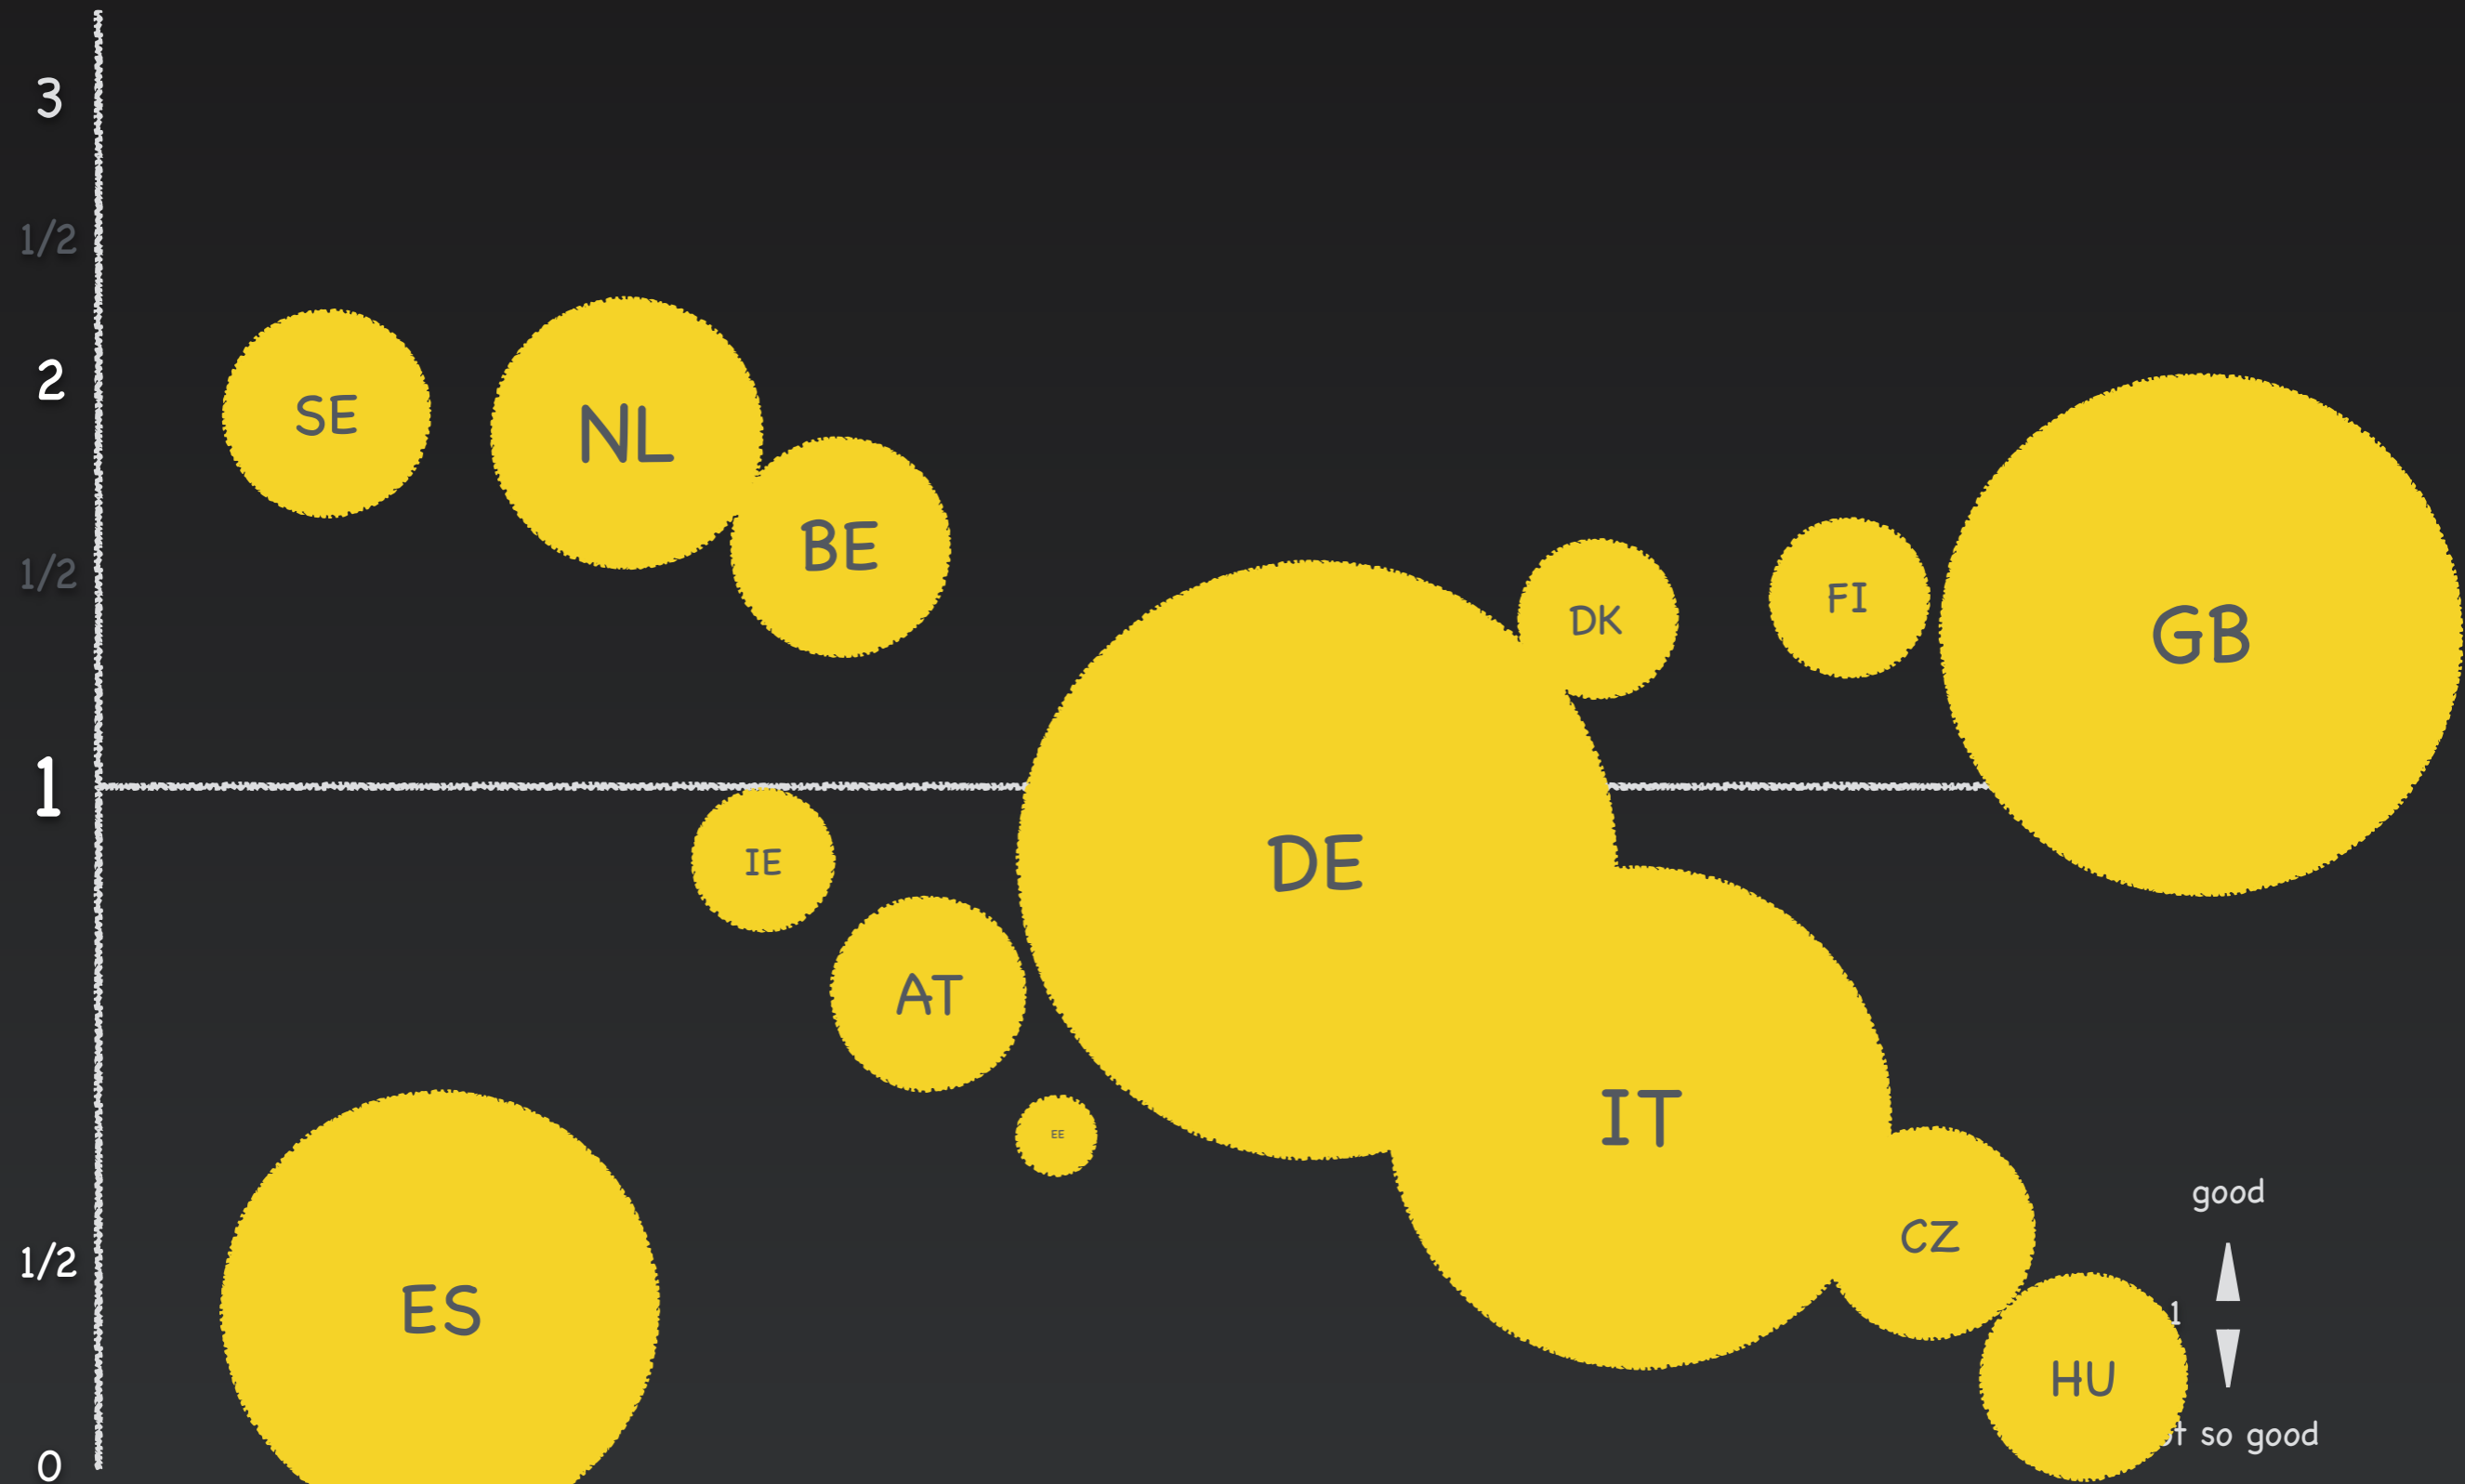

Adding Market Coverage Data

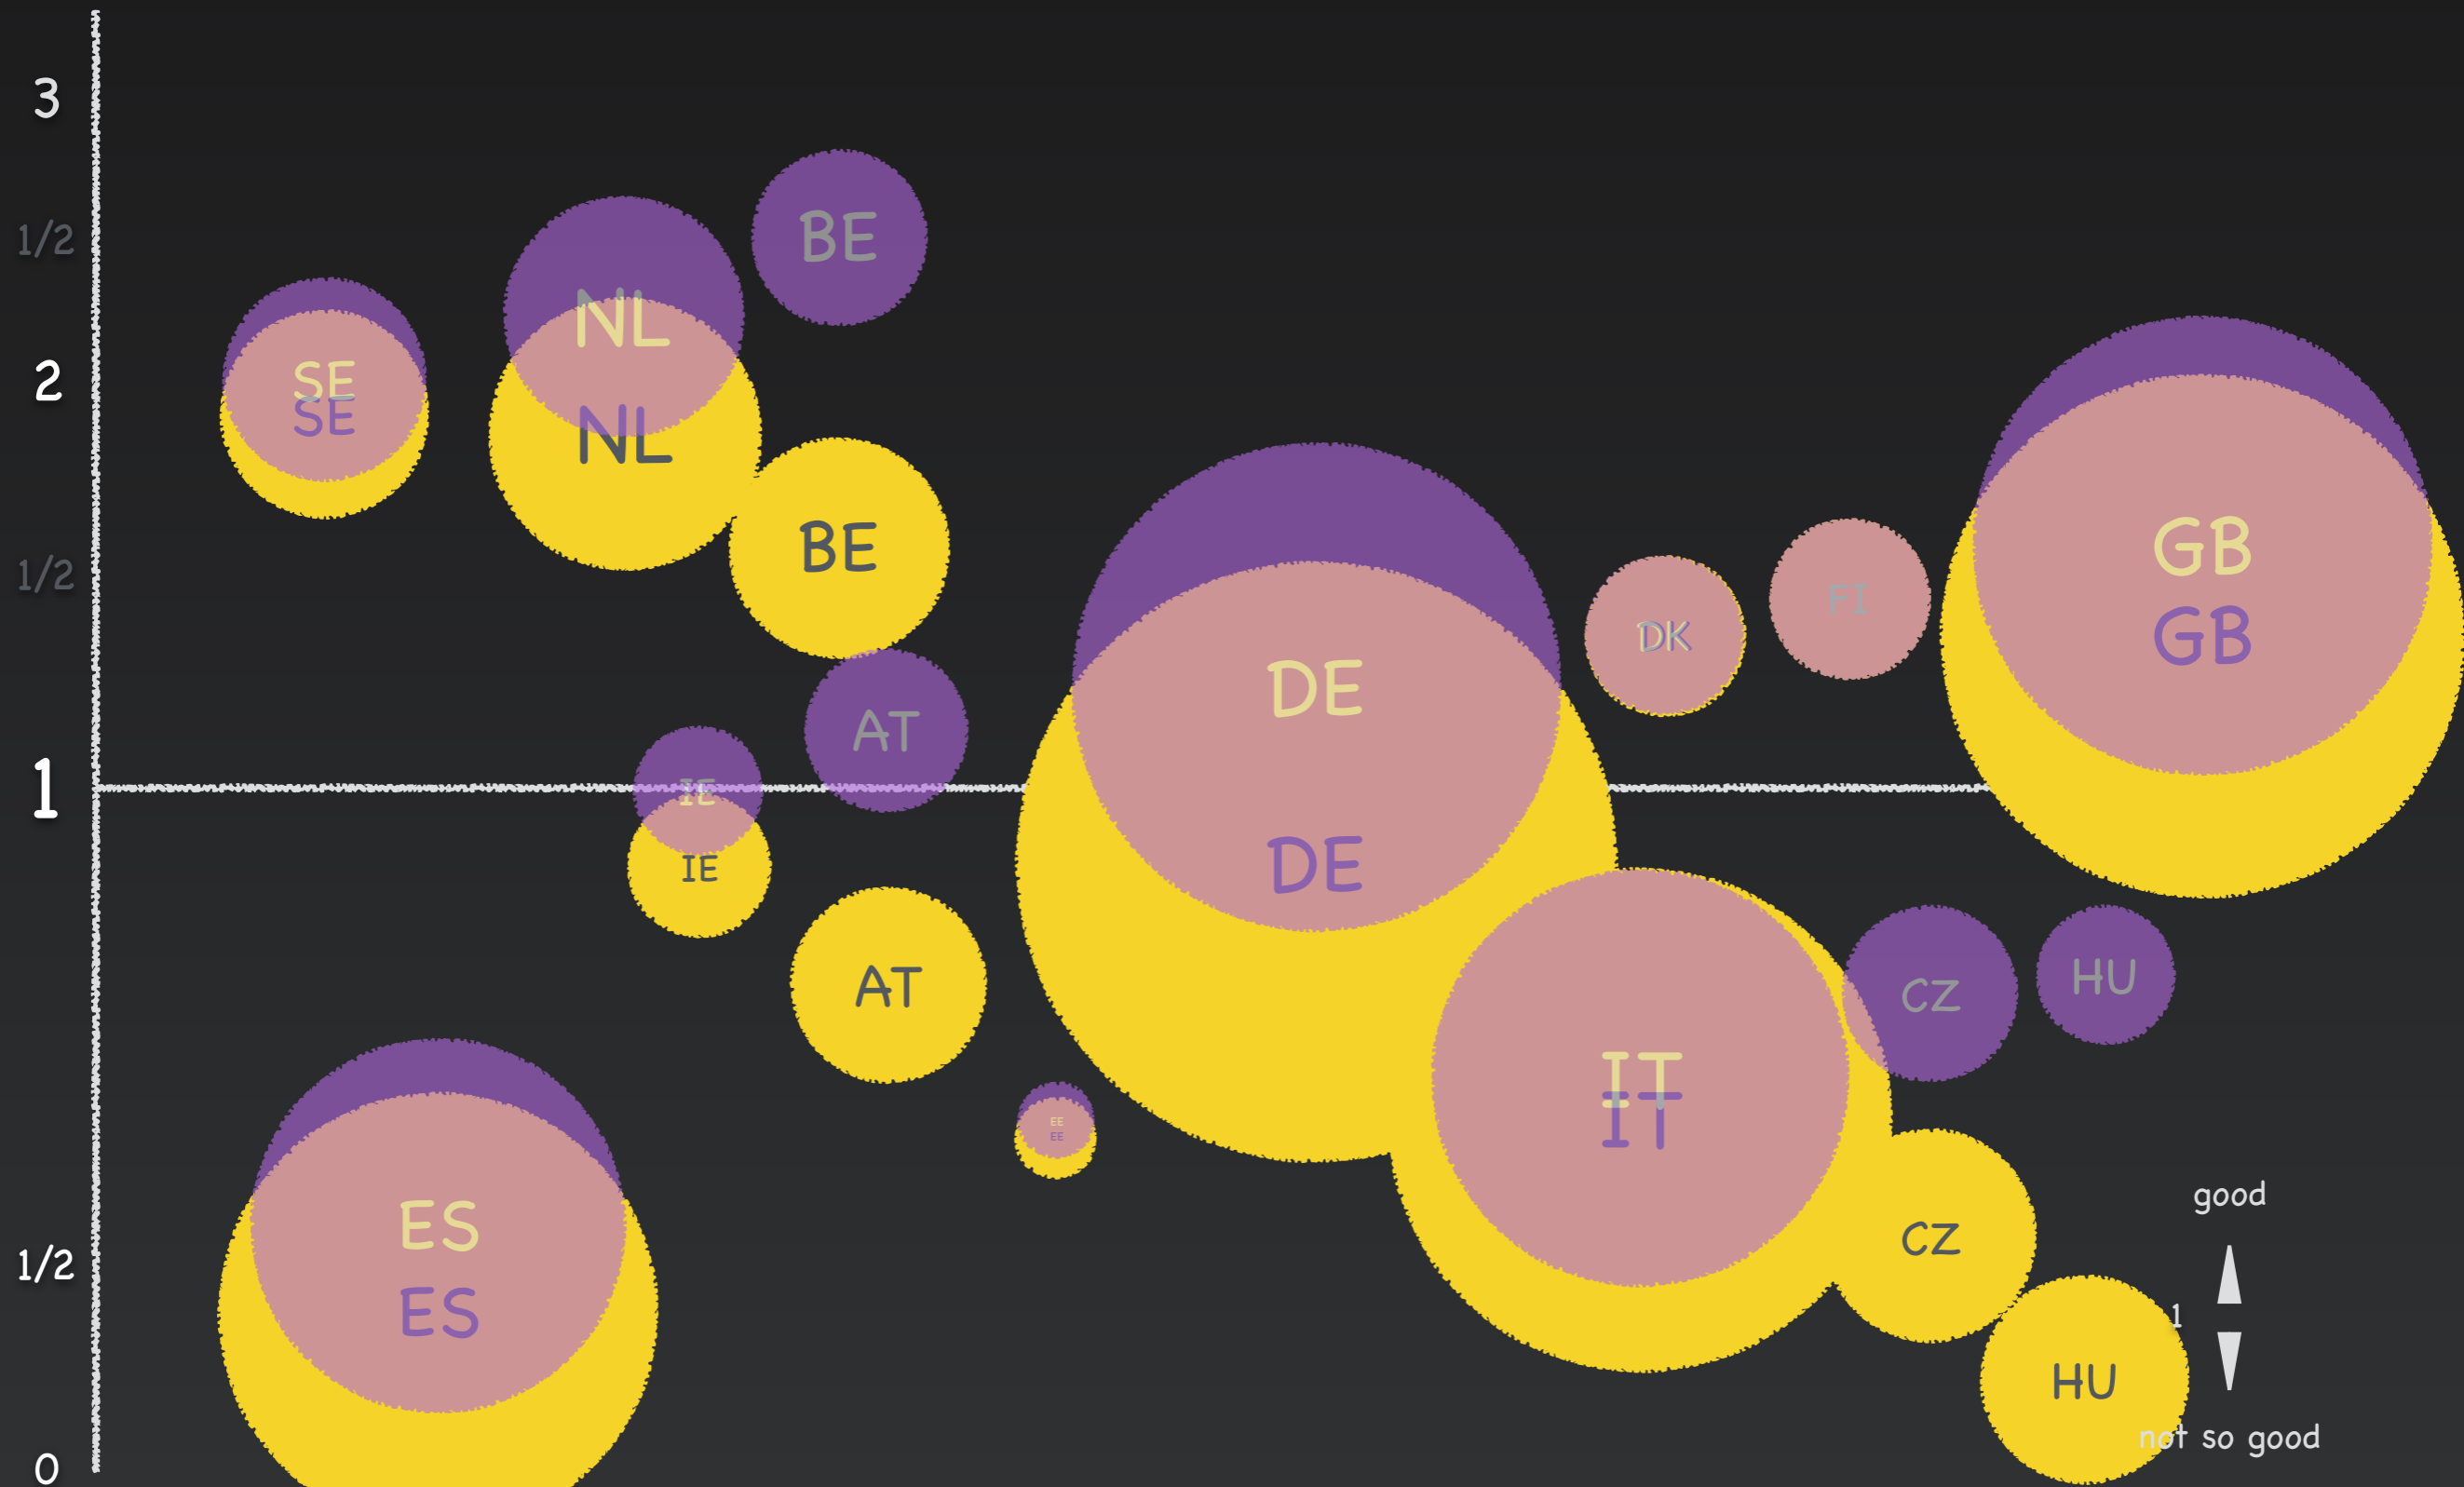

Theoretical Saturated Market

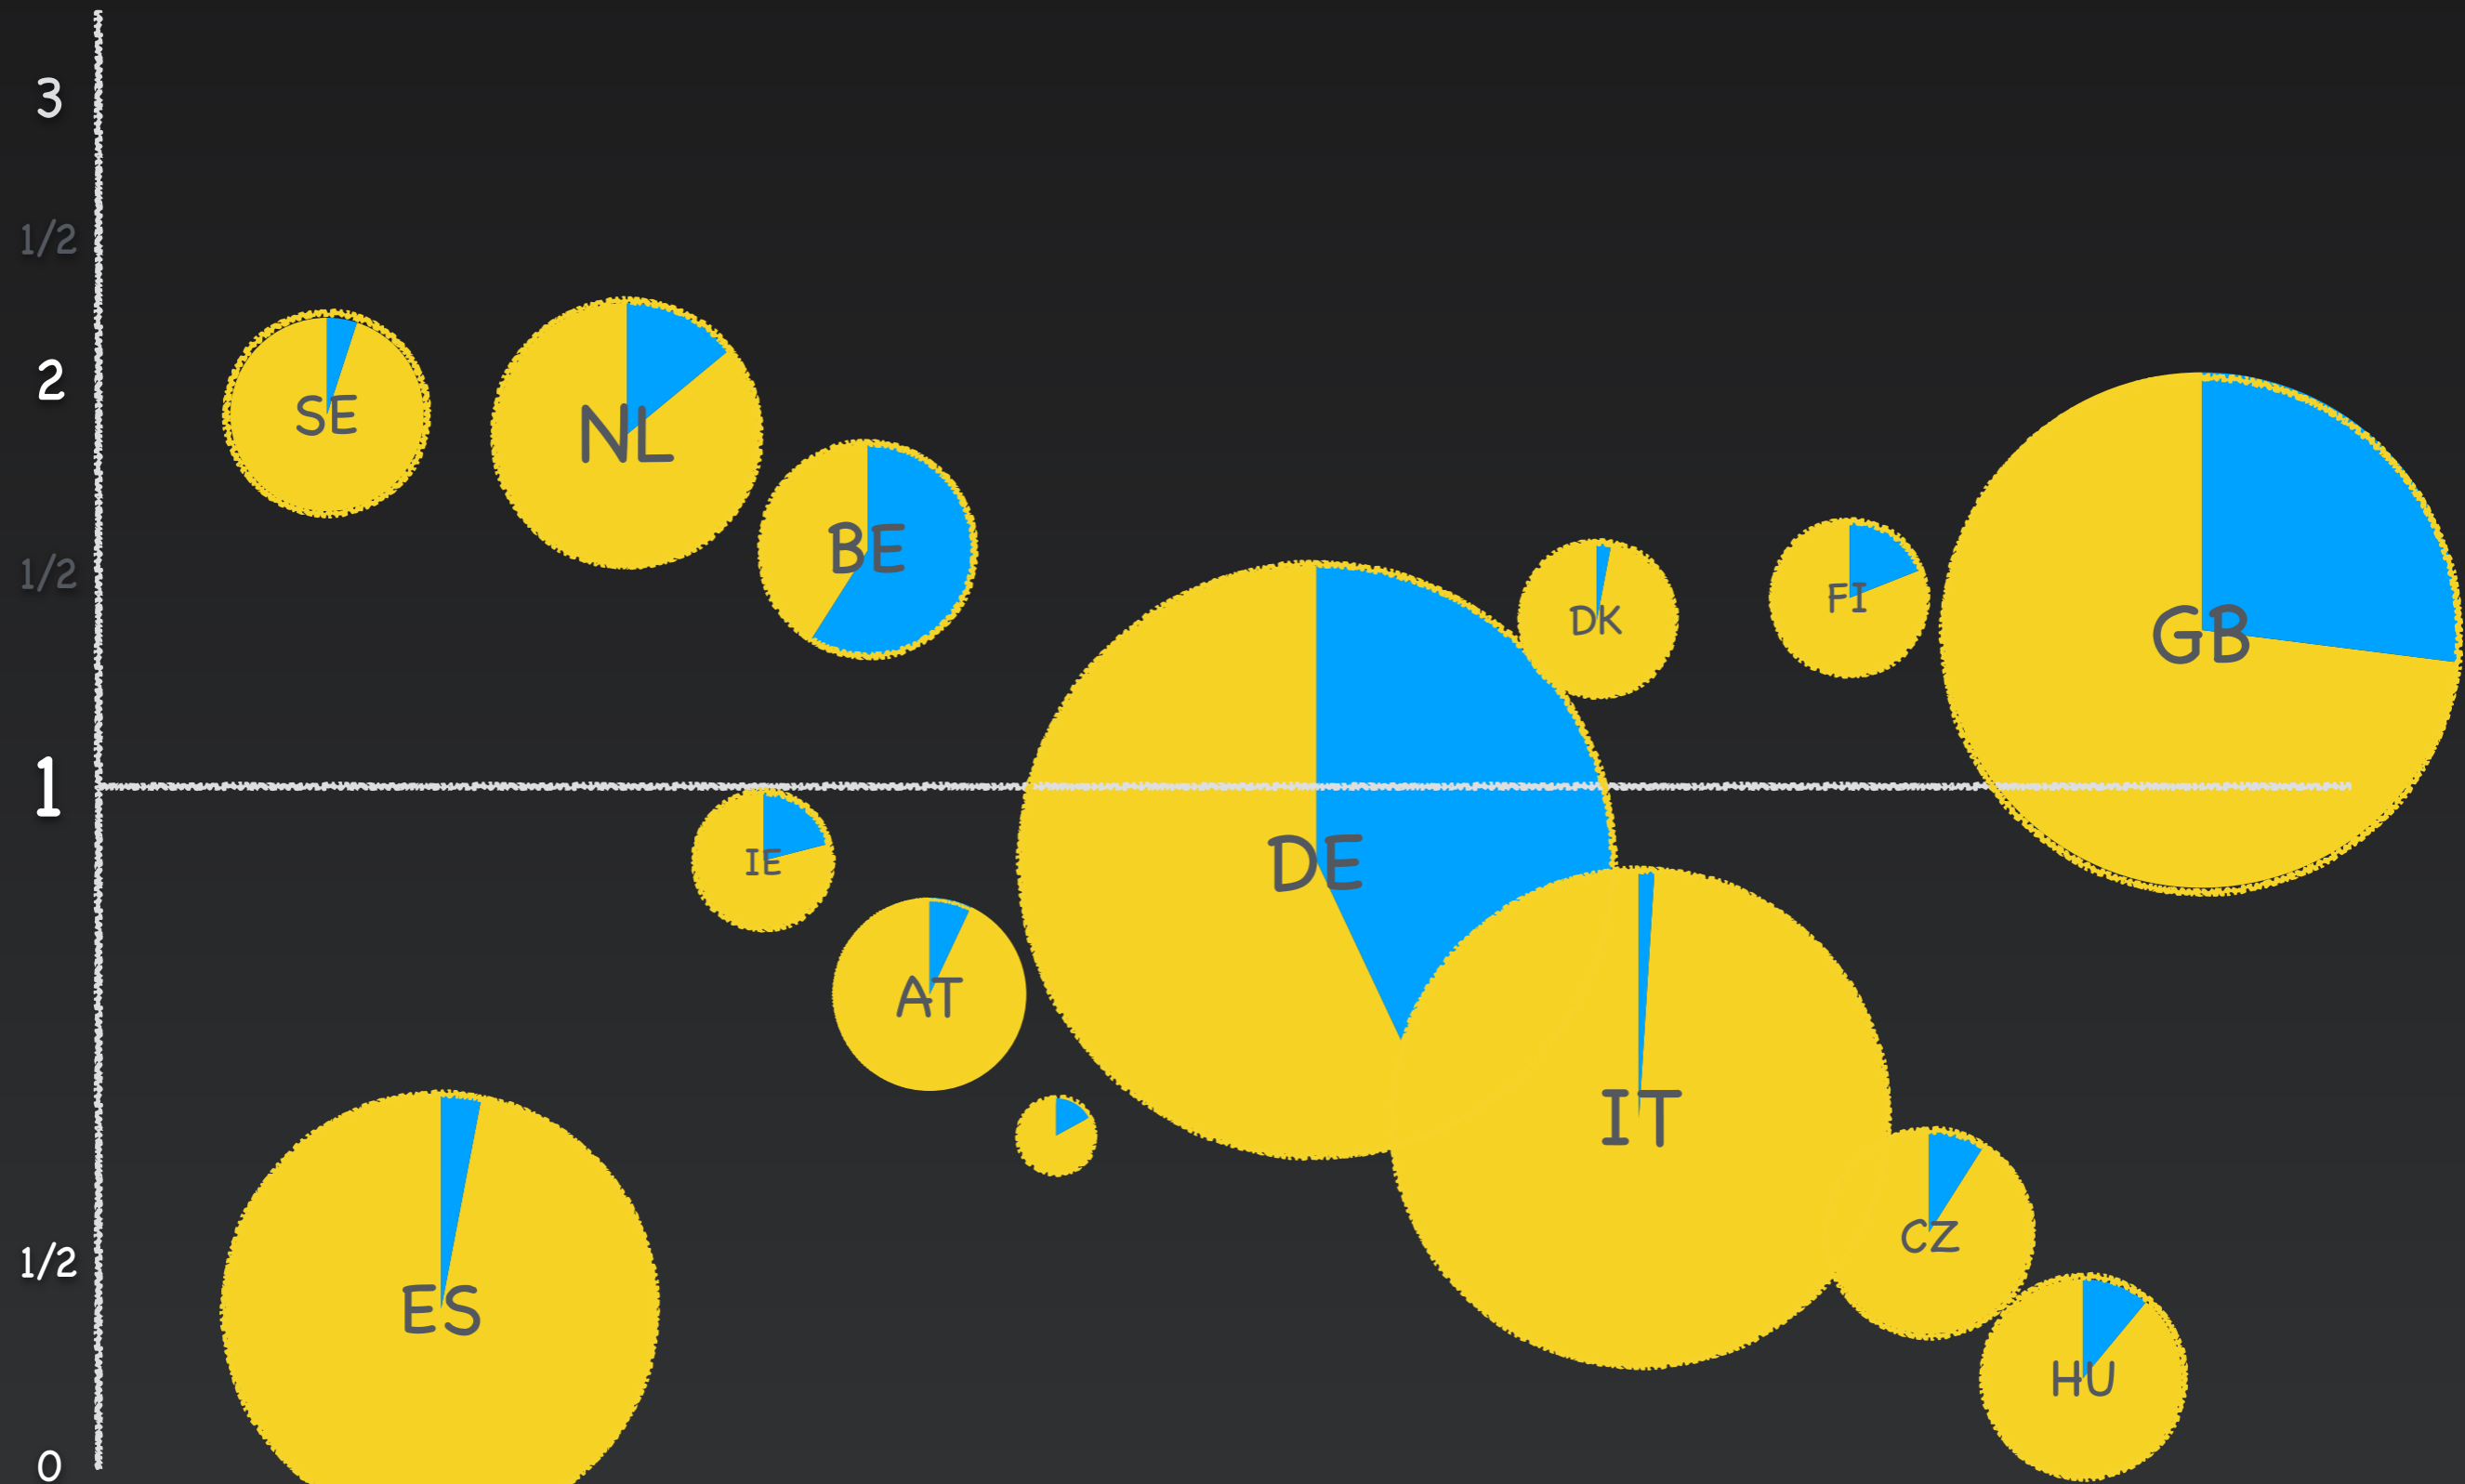

Future: IPv4 in Saturated Market

Current and Future

Percentage of IPv6

Soft Conclusions

- Many markets already have more connections than they have IP addresses available
 - Which means that they are using CGN somewhere
 - This situation is not expected to improve over time
- Some markets likely to fall below the threshold
 - Introduction of address sharing should be expected
- Not sure CGN is driving IPv6 adoption
 - No large pressure on IPv4 in Belgium

Final Thought

- Magyar Telekom reported revenue 1.8 bn
 - Reported EBITDA was EUR 545 million
- With “only” 1.4 million IPv4 addresses?
 - Over EUR 300 per IPv4 address/year
- Is CGN a cost or an investment?

Is this useful?

Open Data is Important

- Data sources used in this
 - Regional Internet Registry data (IPv4 and IPv6)
 - Financial reporting information (company numbers)
 - OECD broadband portal (connections per country)
 - UN stat (population, households)
- Manually processed
 - APIs are missing or not standardised
 - Not all data is current (households from 2011)
